

Semester/Year:	III Sem / II Year
Course Code:	26MBA6301
Title of The Course:	Strategic Management
L: T: P: C:	2: 0: 2: 3

Overview

Organizations navigate unprecedented complexity in today's digital, interconnected global economy. The convergence of technological disruption, platform ecosystems, geopolitical shifts, and sustainability imperatives has fundamentally transformed competitive dynamics. Managers must develop sophisticated capabilities in strategic analysis, ecosystem thinking, and adaptive strategy formulation to ensure organizational resilience and sustained competitive advantage.

This course provides future managers with cutting-edge strategic management frameworks aligned with leading global institutions including London Business School, Harvard Business School, IIM Ahmedabad, and IIM Bangalore. The curriculum integrates traditional strategic analysis with contemporary topics such as platform strategy, digital transformation, ecosystem orchestration, sustainability integration, and adaptive governance. Students will develop the analytical rigor and strategic acumen required for leadership roles in today's dynamic business environment.

Course Objectives

1. To develop advanced strategic thinking capabilities applicable across all management disciplines and business contexts
2. To conduct comprehensive environmental analysis using contemporary frameworks including platform economics and ecosystem dynamics
3. To formulate competitive strategies integrating digital transformation, sustainability, and stakeholder value creation
4. To analyse strategic alternatives using rigorous analytical tools and apply decision-making frameworks under uncertainty
5. To design and implement technology-enabled strategies that drive organizational transformation and competitive advantage

Course Outcomes

After completion of this course students will be able to:

1. Exhibit their fair understanding of concepts, theories, models and principles of Strategic Management course including platform economics, ecosystem theory, competitive dynamics, and strategic frameworks.
2. Demonstrate their ability of applying the skill of concepts, theories, models and principles of Strategic Management course in real-time problem-solving involving business strategy formulation and competitive analysis.
3. Demonstrate their ability of analysing the real-time problems using skill acquired by concepts, theories, models and principles of Strategic Management course including environmental scanning, industry analysis, and strategic evaluation.

4. Exhibit their ability of designing and redesigning existing and new strategic models by using the acquired skills from concepts, theories, models and principles of Strategic Management in real-time problem-solving including platform strategies, digital transformation initiatives, and ecosystem orchestration.
5. Exhibit their ability of developing/redesigning existing and new strategic frameworks by using the acquired skills from concepts, theories, models and principles of Strategic Management in real-time problem-solving including comprehensive strategic plans, sustainability integration, and stakeholder value creation approaches.

Approach to Learning	• Interactive lectures combining theoretical frameworks with real-world applications • Case-based learning using premier case studies • Active student participation through classroom exercises, simulations, and debates, • Collaborative case analysis and group strategic consulting projects • Industry guest speakers and practitioner insights • Digital tools and business analytics applications for strategic analysis
Assessment Strategy	Participants will be assessed on both conceptual understanding and application of concepts and theories by way of: • Strategic analysis mini-projects and case studies • Individual and group assignments with industry applications • Written examinations testing analytical and application capabilities • Class participation and contribution to strategic discussions • Strategic audit and consulting project presentations

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to Strategic Management Core Concepts – Evolution and nature of strategy: Deliberate vs. emergent approaches; strategic management process; competitive advantage and value creation foundations. Industry and Competitive Analysis – Michael Porter’s five forces: Industry structure and profitability drivers; strategic groups and competitive positioning; complementors and value net; industry life cycle and strategic implications. Environmental Scanning – PESTLE framework and macro-environmental opportunities/threats; scenario planning under uncertainty; SWOT integration and strategic option formulation. Internal Analysis – Value chain and activity-based advantage; Resource-Based View (RBV) and VRIO framework; dynamic capabilities and organizational agility.	6
Unit II	Business-Level and Corporate Strategy Business-Level Strategies – Generic strategies: Cost leadership, differentiation, and focus; strategic positioning and sustainability of competitive advantage; Blue Ocean strategy: Value innovation and strategy canvas; Strategies across industry contexts: Fragmented, emerging, mature, and declining industries. Corporate Strategy – Vertical integration (forward, backward, taper); horizontal integration and market consolidation; related and unrelated diversification; Portfolio tools: BCG growth-share matrix and GE–McKinsey matrix; mergers, acquisitions, and strategic alliances. Global Strategy – International expansion and entry modes; global integration vs. local responsiveness; emerging market and base-of-the-pyramid strategies.	7

Unit III	Platform Strategy and Digital Ecosystem Management Platform Economics Fundamentals – Multi-sided platforms and network effects (direct and indirect externalities); platform business models (transaction vs. innovation platforms); value creation and capture in platform ecosystems; critical mass, chicken-and-egg challenges, and platform launch strategies. Ecosystem Strategy and Orchestration – Business ecosystems as meta-organizations with non-hierarchical coordination; ecosystem orchestration through platform governance and complementor management; coopetition dynamics; strategic bottlenecks and power distribution in ecosystems. Digital Business Models and Transformation – Digital transformation and organizational change frameworks; data-driven strategy and algorithmic decision-making; platform competition (proprietary vs. open ecosystems); disruptive innovation and incumbent responses (Christensen framework); AI-enabled business models and agentic AI implications.	7
Unit IV	Strategy Implementation and Adaptive Governance Organizational Design and Structure – Strategy, structure alignment and organizational architectures; functional, divisional, matrix, and network organizational structures; Ambidextrous organizations: Balancing exploitation and exploration. Strategic Control and Performance Management – Strategic control systems and key performance indicators; balanced scorecard integrating financial and non-financial performance measures; Organizational culture and values-Driven strategy execution; reward systems and incentive alignment. Strategic Leadership and Governance – Strategic leadership capabilities and executive decision-making; corporate governance structures and stakeholder management; business ethics, corporate social responsibility, and ESG integration; strategic agility and organizational resilience; entrepreneurial strategy and corporate venturing. Behavioural Strategy - Managerial cognition and biases in strategy formulation; bounded rationality in executive decisions; escalation of commitment.	6
Unit V	Advanced Strategic Tools and Contemporary Applications Strategic Analysis Frameworks – McKinsey & Company 7S framework: Strategy, structure, systems, skills, staff, style, and shared values; competitive profile matrix (CPM) and strategic benchmarking; SPACE matrix: Strategic position and action evaluation; experience curve and cost dynamics (BCG framework).	4

	Strategic Audit and Integration – Comprehensive strategic audit methodology; value chain analysis; strategic risk assessment and management; sustainability strategy integration and stakeholder value creation.

- Strategic Management – Prof. Robert Austin – Coursera.

Semester/Year:	III Sem / II Year
Course Code:	
Title of The Course:	Research to Publications
L: T: P: C:	1: 0: 0: 1

Overview

Research to Publications equips students with essential knowledge and practical skills to transform research ideas into publishable academic manuscripts. The course introduces the role of research in management, structure of scholarly papers, literature review

techniques, and research design approaches. Students gain hands-on exposure to data collection, basic statistical tools, and result interpretation. Emphasis is placed on academic writing, referencing, journal selection, submission procedures, and publication ethics. By the end of the course, student will be able to systematically develop, write, and submit research papers while adhering to ethical standards and quality benchmarks of indexed journals.

Course Objectives

1. To explain the research publication ecosystem, paper structure, and indexing systems
2. To apply literature review tools and research designs to formulate research problems and hypotheses
3. To analyse collected data using statistical tools and interpret results meaningfully
4. To evaluate appropriate journals and submission platforms based on scope, impact, and ethics
5. To create a research manuscript following academic writing standards and referencing

Course Outcomes

After completion of this course students will be able to:
1. Exhibit fair understanding of concepts, theories, models and principles of Research to Publication course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of Research to Publication in real time research problem solving.
3. Demonstrate the ability of analysing the real time research problems using skills acquired by concepts of Research to Publication course.
4. Exhibit the ability of designing and redesigning existing and new research frameworks, methodologies and analytical models by using the acquired skills from concepts of Research to Publication in real time problem solving.
5. Exhibit the ability of developing / redesigning complete research manuscripts and publication strategies by using the acquired skills from concepts of Research to Publication in real time research problem solving.

Approach to Learning	• Audio & Video • Usage of software's for analysis • Research articles • Case study • Visual presentation
Assessment Strategy	Students will be assessed through: • In-class activities, presentations or practical data analysis • Publications • Assignments

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to Research and Publication Role of research in management education and practice, types of academic publications, anatomy of a research paper (Title, Abstract, Introduction, Literature Review, Methods, Results, Discussion, Conclusion), overview of publication process- Scopus, ABDC, WoS, SSCI, Journal Indexing and Impact Factors.	2
Unit II	Literature Review & Research Design Literature review process and tools (Google Scholar, Scopus, Mendeley/Zotero), structuring a coherent literature review, formulating research problems and objectives, hypothesis development, research design: qualitative, quantitative, mixed-method, experimental research.	2
Unit III	Data Collection, Analysis & Interpretation Data sources: Primary vs Secondary, Tools for data collection: Surveys, interviews, datasets, visual representation of data (tables, charts), statistical tools and software overview (SPSS, Excel, R basics, PLS-SEM overview), interpreting results and drawing conclusions.	3
Unit IV	Writing and Structuring a Research Paper Writing abstracts and keywords, writing of introduction- Do's and don'ts, difference between the results and discussion sections, writing great effective results and discussion sections, writing styles: Academic tone, clarity, and structure, Referencing styles: APA, MLA, Chicago (focus on APA).	2
Unit V	Submission Process and Ethics in Publication Choosing the right journal (using tools like Journal Finder), submission portals (Editorial Manager, ScholarOne), ethical issues: Plagiarism, duplicate submission, authorship disputes.	1

Semester/Year:	III Sem / II Year
Course Code:	26MBAF001
Title of the Course:	Financial Markets & Services

L: T: P: C:	3: 0: 2: 4
--------------------	-------------------

Overview

In this rapidly evolving financial industry, an understanding of the financial markets and services is of utmost importance. This course delivers an understanding of the financial system in India, including the financial market structure, financial instrument, financial services and regulators. It also covers the recent financial sector developments towards technological integration and sustainability requirements.

Course Objectives

1. To develop an understanding of the financial system in India and its components
2. To discuss commercial banking, loan appraisal and process, and NPA management
3. To analyse the variety of financial services, including fee based and fund-based services
4. To evaluate the green finance instruments and ESG investing
5. To understand the recent developments in FinTech and innovative digital financial products and services

Course Outcomes

1. Exhibit a fair understanding of concepts, theories, models and principles of the financial system in India and its components.
2. Demonstrate the ability of applying the concepts, theories, models and principles of commercial banking, loan appraisal and process, and NPA management in real-time problem-solving course.
3. Demonstrate the ability of analysing the real-time problems using the concepts, theories, models and principles of financial services, including fee-based and fund-based services.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of the green finance instruments and ESG investing
5. Exhibit the ability of developing existing and new models by using the acquired skills from concepts, theories, models and principles of recent developments in FinTech and innovative digital financial products and services

Approach to Learning	● Lectures ● Readings ● Active classroom participation and exercises ● Case analysis, research article review
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of finance practices by way of: ● Mini projects ● Group assignments ● Individual assignments ● Quiz ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction Financial system in India, financial markets- Primary & secondary market, capital market and money market, debt and equity market, financial instruments, Indian banking system: Evolution of banking system, nationalization of banks, need, objectives, classification of financial institutions: Classification of banks, functions performed by banks, non-banking financial companies (NBFCs): Features and functions, financial regulatory and promotional institutions - RBI, SEBI, IRDA, PFRDA.	10
Unit II	Commercial Banking Banking products: Consumer loan, agricultural loan, industrial loan, project financing, MSME & priority sector financing, loan appraisal. BASEL norms, asset liability management, CAR (Tier 1 and Tier 2 capital). NPA management, reasons for NPA, SARFAESI Act, case studies on major banking failures and their impact on banking system.	7
Unit III	Financial Services Merchant banking: Meaning, functions, role, IPO and merchant bankers: Pre and post issue management, offer for sale, book building, green shoe option, private placement, bought out deals. Fund and fee based financial services: Fund based services: Leasing and hire purchasing, bills discounting, factoring and forfaiting, venture capital. Fee based financial services: Mergers and acquisitions, portfolio management services, credit syndication, credit rating, mutual funds.	8

Unit IV	ESG Investing and Green Financial Instruments Introduction to sustainable finance - Concepts, principles, stakeholders, UN SDGs, ESG investing and impact finance, ESG mutual funds/ETFs, impact investing, responsible investment principles, green bonds and climate, aligned instruments, structure and benefits of green bonds, climate bonds initiative, greenwashing risks, regulatory frameworks and disclosures, SEBI's BRSR (Business Responsibility and Sustainability Reporting), TCFD (Task Force on Climate-related Financial Disclosures).	7
Unit V	Recent Trends in Banking Recent changes in banking system: Digital banking, neo banking, banking innovations, recent trends in financial services: Fintech- Introduction, the evolution and impact to the financial services industry: A basic overview of the key technologies that are driving the transformation, digital payments, UPI, digital rupee, crypto currency.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAF002
Title of the Course:	Mergers, Acquisition and Restructuring
L: T: P: C:	3: 0: 2: 4

Overview

An understanding of mergers and acquisitions as a discipline is increasingly important in modern business. In this course, students get an overview of all aspects of the mergers and acquisitions (M&A) process and transaction. They will learn the concepts, theories, methods and the fundamentals of M&A transactions and strategies.

Course Objectives

1. To develop an understanding of corporate mergers and acquisitions activity and restructuring
2. To describe the process of mergers and regulatory framework related to mergers and acquisitions
3. To analyse the valuation frameworks like free cash flow to the firm, adjusted present value, and relative valuation
4. To evaluate the M&A issues, deal structures and the need for a value proposition
5. To identify and explain the critical success factors and challenges in post - merger integration

Course Outcomes

1. Exhibit the fair understanding of concepts, theories, models and principles of mergers, acquisitions, and various forms of corporate restructuring and their strategic relevance in business organizations in the mergers, acquisitions and corporate restructuring course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of the regulatory framework governing mergers and acquisitions in India, including Companies Act, SEBI regulations, Competition Act and related compliance requirements in the mergers, acquisitions and corporate restructuring course.
3. Demonstrate the ability of analyzing real-time problems using skill acquired by concepts, theories, models and principles of valuation methods such as asset-based, income-based, and market-based approaches for mergers and acquisitions in the mergers, acquisitions and corporate restructuring course.
4. Exhibit the ability of designing and redesigning acquisition and restructuring models by using the acquired skills from concepts, theories, models and principles of target valuation, synergy assessment, and long-term partnership evaluation in the mergers, acquisitions and corporate restructuring course.
5. Exhibit the ability of developing or redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of merger integration, deal structuring, and post-merger management to address complexities in merger and acquisition processes in the mergers, acquisitions and corporate restructuring course.

Approach to Learning	• Lectures • Readings • Classroom exercises, group discussion • Case analysis, research article review • Quiz
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of finance practices by way of: • Class participation • Mini projects • Group assignments • Quiz • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to Corporate Restructuring, Mergers and Acquisitions Meaning, objectives, motives, types and forms of corporate restructuring, types and distinction between mergers and acquisitions, theories of merger, difference between demerger and reverse merger, takeover tactics and takeover defences, cross border mergers and acquisitions.	7
Unit II	Mergers & Acquisition Process, Statutory Framework Merger and acquisition process, prospecting, due-diligence and checklist including Environmental, Social and Governance due-diligence. Regulatory framework for mergers and acquisitions, scheme of mergers, statutory approvals, compliance with Indian Companies Act, Competition Act 2002, Income Tax Act, Securities and Exchange Board of India - Substantial acquisition of shares and takeovers regulations, 2011.	8
Unit III	Valuation and Accounting Concepts of value, methods of enterprise and equity valuation, Goodwill based valuation, merger and acquisition cash flow valuation basics, dividend discount valuation model, discounted cashflow valuation, stable state and two stage DCF valuation models, relative valuation, business valuation approaches - Asset based, market based and income-based approaches, exchange ratio (Swap Ratio). Methods of determining SWAP ratio (Theory and problems). Accounting for mergers and acquisitions - Amalgamation in the nature of mergers, and amalgamation in the nature of purchase, pooling of interest method, purchase method.	10

Unit IV	Deal Structuring, Financing Strategies, Negotiating Terms Finding the optimal capital structure: Debt, equity and mezzanine financing, asset-based financing, PE financing etc. Role of leverage, the leverage effect and strategic buyer, leveraged buyout. Negotiating Terms – Term Sheet, role of investment bankers and other advisors, developing a negotiating stance, understanding sellers' goals and constraints, dealing with defensive strategies: Poison pills and other devices, structuring the deal - Payout & payment mechanism. Structure of a basic term sheet, closing the deal.	8
Unit V	Post Merger Integration M&A appraisal - Success and failure of merger & acquisition. Causes and reasons, post-merger integration, critical success factors for post-merger integration, ingredients of integration, approaches to integration, challenges in integration, cultural integration. Setting up integration management office (IMO), Ernst Young's - Nine steps in setting up an IMO. Recent cases on mergers and acquisitions: Indian and International context.	7

2. Coursera- Finance of Mergers and Acquisitions: Designing an M&A Deal offered by University of Illinois at Urbana-Champaign

Semester/Year:	III Sem / II Year
Course Code:	26MBAF003
Title of the Course:	Security Analysis and Portfolio Management
L: T: P: C:	3: 0: 2: 4

Overview

This course provides conceptual foundation for investment analysis in securities. Students develop analytical and practical abilities to make smart investment decisions in dynamic financial markets. The course begins with the foundational concepts of investment, risk, and return, and advances through security valuation models, portfolio theory, and asset pricing frameworks. It further explores portfolio management strategies, performance evaluation, and emerging domains such as behavioural finance and ESG (Environmental, Social, and Governance) investing. Excel-based financial modelling and case studies facilitate experiential learning, allowing students to apply theoretical knowledge to investment decision-making and portfolio optimisation.

Course Objectives

1. To understand the fundamental concepts, characteristics, and processes of investments and securities markets
2. To analyse and interpret the relationship between risk and return using both theoretical frameworks and quantitative tools
3. To evaluate the intrinsic value of equity and fixed-income securities through fundamental and technical analysis techniques
4. To develop and optimize investment portfolios using modern portfolio theory and asset pricing models
5. To critically assess portfolio performance, understand behavioural biases influencing investor decisions, and integrate ESG principles into investment strategies

Course Outcomes

1. Exhibit the fair understanding of concepts, theories, models and principles of security analysis and portfolio management course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of security analysis and portfolio management in real-time problem-solving course
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of security analysis and portfolio management course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of security analysis and

portfolio management in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of security analysis and portfolio management in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Active student participation and class room exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of finance practices by way of: • Case study analysis (Individual / Group) • Mini projects • Submission of assignments • Group assignments • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Foundations of Investment Introduction to investment - Meaning, characteristics, objectives, investment environment - Process, securities market overview- Primary & secondary markets types of securities, trading systems, market microstructure basics. Risk & return concepts: Introduction to risk - Causes, types. Returns - Meaning, types. Risk return relationship, arithmetic vs geometric returns, variance, covariance, beta estimation, portfolio risk decomposition (Theory & Numerical), calculating returns & risk metrics using excel.	9
Unit II	Security Valuation Techniques Fundamental analysis - Economic analysis, industry analysis & company analysis (EIC). Technical analysis - Concepts, theories - Dow theory, Eliot wave theory, efficient market hypothesis. Charts - Types, mathematical indicators: moving averages, RSI. Valuation: Equity valuation - Dividend discount models, FCFE, relative valuation (P/E, EV/EBITDA). Fixed income valuation - Bond pricing, yield measures, duration, convexity, term structure of interest rates. Excel integration - Bond price, DDM & trading view platform (Theory & Problems).	9
Unit III	Portfolio Theory & Asset Pricing Models Portfolio construction - Markowitz model, Sharpe Single Index Model, CML & SML, CAPM, APT, optimum portfolio construction, portfolio optimisation using excel solver.	9

Unit IV	Portfolio Management Strategies & Performance Evaluation Portfolio management strategies - Active & passive, portfolio revision strategies. Mutual funds - Concept, types, advantages & disadvantages, portfolio performance evaluation: Measures of portfolio performance - Sharpe ratio, Treynor ratio, Jensen's alpha (Theory & Numericals).	9
Unit V	Behavioural Finance, ESG Investing Introduction to behavioural finance, differences, investor biases and heuristics, impact on asset prices and portfolio performance, theories of behaviour. Introduction to ESG, ESG framework in investment decisions, integration approaches, global standards and benchmarks, ESG investing challenges.	9

Semester/Year:	III Sem / II Year
Course Code:	26MBAF004
Title of the Course:	Financial Derivatives and Risk Management
L: T: P: C:	3: 0: 2: 4

Overview

The course aims at exposing the students to and making them conversant with the financial intricacies that the complex world of derivatives holds out for them. Students would then dare to deploy these tools as a part of their learning in the corporate world management strategies, being fully aware while doing so, of the pros they carry with them and the cons that could befall an ill-advised end user.

Course Objectives

1. To understand the basics of derivatives and identify how derivative instruments can be used to hedge the risk
2. To explain the forward market and forward rate agreements
3. To comprehend the futures and swaps and their uses in risk management
4. To identify the basic risk management and trading strategies using futures and options
5. To analyse various pricing models of stock prices, trading, hedging of options

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of financial derivative and risk management course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of financial derivative and risk management in real-time problem-solving course
3. Demonstrate the ability of analyzing the real time problems using skill acquired by concepts, theories, models and principles of financial derivative and risk management course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of financial derivative and risk management in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of financial derivative and risk management in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Active student participation and class room exercises • Case analysis collaboratively with student involvement	
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of finance practices by way of: • Mini projects • Submission of assignments • Group assignments • Written exam	Please include

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to Derivatives Introduction to financial derivatives, types of derivatives - Forwards, futures, swaps, options. Participants in derivative market, application of derivatives in risk management, hedging and speculation.	8
Unit II	Forwards and Futures Forwards and futures market, mechanics of futures markets, margin account - Types of margin different categories of forwards and futures, hedging strategies, valuation, determination of forward and futures prices, risk management using futures (Arbitrager and hedgers), Fra-forward rate agreement, problems on Fra contracts and margin account.	8
Unit III	Swaps Characteristics of swaps, categories of swaps, mechanics of interest rate swaps, currency swaps – Application, valuation, usage of swaps in risk management. Swap strategy, problems on IRS, currency swaps.	8
Unit IV	Options Markets and Contracts Introduction: Basic definitions and illustrations of option contracts, basic characteristics of options, some examples of options, the concept of moneyness of an option, types of options, financial options, Greeks of options. Option pricing - Binomial option pricing model (1, 2 and 3 step models), factors affecting the options price, Black Scholes option pricing model - Black Scholes Assumption, interpreting the Black Scholes model - Implied volatility, option pricing strategy.	8

Unit V	Advanced Derivatives and Risk Management Exotic options, introduction to exotic options, barrier options, Asian options, structured products - Introduction to structured products, structured products types, structured product pricing, portfolio risk management - Overview of portfolio risk management, value-at-risk (VaR), stress testing, alternative risk transfer - Overview of alternative risk transfer, insurance-linked securities, catastrophe bonds, sustainability-linked derivative (SLDs).	8

Semester/Year:	IV Sem / II Year
Course Code:	26MBAF005
Title of the Course:	International Financial Management
L: T: P: C:	3: 2: 0: 4

Overview

In an increasingly integrated global economy, an understanding of International Financial Management is essential for managers and financial decision-makers. This course provides a comprehensive understanding of the international financial environment, including foreign exchange markets, exchange rate determination, and global capital markets. It examines key issues in cross-border financial management such as foreign investment decisions, international financing, and management of currency and political risks. Through this course, learners develop the analytical perspective required to make informed financial decisions in a dynamic and uncertain international business environment.

Course Objectives

1. To understand the foundational knowledge of the global financial environment by examining multinational enterprises, international monetary systems, risk exposures, multilateral institutions, and international trade theories
2. To analyse the structure and functioning of foreign exchange markets, exchange rate quotations, arbitrage processes, and global payment mechanisms
3. To evaluate the currency risk in international business and, identify and manage various foreign exchange and interest rate exposures using hedging techniques and derivative instruments
4. To develop understanding of the international capital and money markets, global financing instruments, cross-border capital budgeting, and modern funding options
5. To critically assess international parity conditions, global asset management, regulatory frameworks, and contemporary issues such as DTAA, transfer pricing, IFRS, and global institutions

Course Outcomes

1. Exhibit a fair understanding of concepts, theories, models and principles of the global financial environment, international monetary systems, multilateral institutions, and international trade theories
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of foreign exchange market operations—including cross rates, arbitrage opportunities, and international payment systems (SWIFT, CHIPS, SEPA)
3. Demonstrate the ability of analyzing the real time problems using skill acquired by concepts, theories, models and principles of hedging strategies using financial derivatives such as forwards, futures, options, swaps, and interest rate risks in multinational operations
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of global financing instruments (bonds, loans, ADRs/GDRs, securitized products) and evaluate

international capital budgeting decisions, cost of capital, and emerging financing trends like crypto assets and crowdfunding
5. Exhibit the ability of developing existing and new models by using the acquired skills from concepts, theories, models and principles of parity relationships, global portfolio strategies, international tax planning mechanisms, and IFRS implications for FX exposure reporting within the global regulatory environment

Approach to Learning	• Lectures • Readings • Active classroom participation and exercises • Case analysis, research article review
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of finance practices by way of: • Mini projects • Group assignments • Individual assignments • Quiz • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction Multinational enterprise and multinational financial management, international monetary system, exposure to international risk- Country & political risk, exchange rate risk, interest rate risk, inflation rate risk, multilateral financial institutions, factors affecting international trade and capital flow, balance of payments, international trade theories- Absolute advantage, comparative advantage, Heckscher-Ohlin theory.	8
Unit II	Foreign Exchange Market Foreign exchange markets - Functions and structure of Forex market, participants, types of transactions, exchange rate quotations, exchange rate behaviour, cross rates, arbitrage profit in foreign exchange markets, triangular and locational arbitrage, international payment mechanism - SWIFT (Society for Worldwide Interbank Financial Telecommunication), CHIPS (Clearing House Interbank Payments System), SEPA (Single Euro Payments Area), Vostro & Nostro Accounts.	7

Unit III	Foreign Exchange Risk Management Exposure management - Economic, transaction and translation, hedging & speculation, managing exposure to exchange rate fluctuation, management of interest rate exposure, FRA, interest rate caps and floors, financial swaps and currency derivatives - Currency forwards, options, futures, swaps - Interest rate risk management.	10
Unit IV	International Capital Market International capital and money markets, bond market, equity market, international sources of finance - Bond financing - Types of bonds, loan financing - Syndicated loans, securitized financing, equity financing - GDR and ADR, international capital budgeting, cost of capital of a foreign investment, international financing decision - issues in overseas funding choices, international working capital & short-term financial management, crypto assets and international crowdfunding.	7
Unit V	International parity relationship and global asset management, arbitrage parity conditions in international finance - Purchasing power parity, covered interest parity, real interest parity, parity conditions and managerial implications. Current asset management, international portfolio investment, foreign direct investment strategy, emerging trends in international finance, international tax planning, double taxation avoidance agreements (DTAA), transfer pricing, global regulatory institutions - WTO, BIS, the international financial reporting standards (IFRS) - Implications in reporting FX exposures.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAH001
Title of the Course:	Employee Relations and Labour Laws
L: T: P: C:	3: 0: 2: 4

Overview

As the world of work is undergoing an unprecedented change, so must HR managers evolve their practices. Flexible work arrangements like working from home and remote/hybrid or virtual offices are all part of the new norm. This shift has put immense pressure on HR managers, who must quickly adapt to new methods for managing their teams and complying with regulatory changes while tackling the impact of the 4 new labour codes once implemented.

HR managers now have to learn how to adjust their processes to comply with changing labour laws and ensure that their teams continue to be productive and engaged in a disruptive work environment. ERLI assures that HR managers emerge as proficient navigators capable of leveraging labour laws to their advantage while tackling contemporary challenges arising from technological change, new employment models, and the ever-evolving workplace dynamics.

Course Objectives

1. To study labour laws relevant to the factories as well as service organisations
2. To master the art of cross-reference techniques within the legal framework consisting of numerous statutes
3. To identify legal issues and ways to resolve legal issues while handling contract management and outsourcing
4. To understand and comprehend important judgments relevant to the needs of professionals in administering various labour laws in their workplace
5. To learn to manage contacts, employment relations, labour market and implement social policies in organisations

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of employee relations and labour laws course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of employee relations and labour laws in real-time problem-solving course
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of employee relations and labour laws course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles employee relations and labour laws in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of employee relations and labour laws in real-time problem-solving course

Approach to Learning	• Theory class • Case study • Presentation • Debate • Assignments • Quiz • Project work
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of ERL strategies through • Assignments, case study, presentation • Debate, reflective essay's, tests and quiz • Individual and group project work • Active student participation and classroom exercises • Case analysis collaboratively with students' involvement

Semester/Year:	III Sem / II Year
Course Code:	26MBAH002
Title of the Course:	Performance Management & Compensation Management
L: T: P: C:	3: 0: 2: 4

Overview

This course entails a study of the concepts, processes and interventions associated with the management of performance in the organization which is an important part of human resource management. Performance Management (PM) is one of the key processes that, when effectively carried out, helps employees know that their contributions are recognized and acknowledged. Performance management is an on-going process of communication between a supervisor and an employee that occurs throughout the year, in support of accomplishing the strategic objectives of the organization. This course will consist of the key concepts, principles, processes and practices associated with performance management which will help management take suitable decisions. Additionally, the course develops in students an understanding of performance, the constituents and dynamics, organisational relevance and implications, benefits to the organisation, teams and the individual, and builds a competence in handling a wide range of performance management issues.

Course Objectives

1. To understand the concept of organizational performance and how it is related to business strategy and people performance
2. To learn the concept of performance management as a process, performance planning, performance appraisal and performance monitoring
3. To understand how a good performance management system in an organization can contribute towards good organizational performance
4. To examine the importance of an effective performance management system in helping organisations define and achieve long term and short- term goals vital to its overall success
5. To learn concept of compensation management and related concepts such as pay models, pay structures and pay ranges and how they are applied to real life scenarios

Course Outcomes

After completion of this course students will be able to:
1. Exhibit the fair understanding of concepts, theories, models and principles of performance & compensation management course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of performance & compensation management in real-time problem-solving course.
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of performance & compensation management course.

4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of performance & compensation management in real-time problem-solving course.
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of performance & compensation management in real-time problem-solving course.

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of HR practices by way of: • Mini projects • Submission of assignments • Group assignments • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to Performance Management System Concept of PMS & importance, PMS process, critical success factors, KRA, KPA and KPIs. Performance management frameworks and their needs, hierarchical and process driven frameworks, balance scorecard, DuPont framework, Porter's value chain framework of performance management, performance management & organizational development, Ansoff 's framework, benchmarking process.	8
Unit II	PMS Design PMS Methods, 360- degree appraisal & feedback, biases in performance management, performance monitoring and related frameworks, mentoring and Protégé development, internal and external mentorship programs, DSMC/ ATI performance improvement model, PMS software (SAP, lattice), real-time feedback tools and mobile platforms, dashboards and analytics for employee performance, gamification in PMS.	8
Unit III	Performance Based Pay Pay for performance basis for pay for performance, competency-based pay, competency-based pay- framework, model and challenges, skill-based pay, team-based rewards, gain sharing, profit-sharing, other cash payments and allowances, business strategy and reward strategy, individual, group and organizational plans of performance-based pay, Scanlon plan.	8

Unit IV	Compensation Management Job based structures and job evaluation, pay model, pay structure, total compensation/reward and its components and types, importance of the total compensation approach, internal & external equity of compensation packages, national wage policy in India, wage fixation and wage problems.	8
Unit V	Future Trends in PM&CM AI in job matching and salary structuring, compensation analytics platforms, AI based real time compensation adjustments, HR, metrics and KPI's (cost per hire, revenue per employee), blockchain in payroll and benefits, hybrid work and its impact on performance and compensation.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAH003
Title Of the Course:	Advanced Hiring System & HRIS
L: T: P: C:	3: 0: 2: 4

Overview

This course provides a comprehensive understanding of workforce planning, job analysis, recruitment, and selection in the context of rapidly evolving HR technologies. It explores manpower forecasting, competency-based hiring, and data-driven decision-making in recruitment and selection. Learners will gain insights into e-recruitment tools, AI-based hiring platforms, HR scorecards, and analytics for performance tracking. The course emphasizes the integration of emerging technologies such as artificial intelligence, machine learning, and blockchain into HR processes, enabling future-ready professionals to design efficient, transparent, and data-driven HR systems. Through practical exposure to tools like power BI, tableau, and google data studio, students will develop analytical skills to visualize HR metrics and enhance strategic workforce management.

Course Objectives

1. To understand the principles and processes of manpower planning, forecasting, and strategic job redesign for effective workforce management
2. To analyse recruitment metrics, competency-based hiring, and predictive analytics in designing data-driven recruitment strategies
3. To apply advanced technologies such as AI, ATS, gamification, and blockchain in hiring and candidate evaluation processes
4. To evaluate various psychological testing tools and assessment methods for selecting and developing talent aligned with organizational goals
5. To develop analytical and visualization skills using HR dashboards and metrics tools (Power BI, tableau, google data studio) for strategic HR decision-making

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of advanced hiring system & HRIS course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of advanced hiring system & HRIS in real-time problem-solving course.
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of advanced hiring system & HRIS.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of advanced hiring system & HRIS in real-time problem-solving course.
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of advanced hiring system & HRIS in real-time problem-solving course.

Approach to Learning	● Lectures ● Readings ● Active student participation and classroom exercises ● Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of HR practices by way of: ● Mini projects ● Submission of assignments ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Work Force Planning & Job Analysis Man power planning & its process, manpower forecasting, strategic job redesign and its benefits, strategic issues in recruitment, recruitment metrics, factors affecting recruitment-internal & external, job analysis & competency-based hiring, predictive analytics & data driven recruitment.	8
Unit II	Hiring Processes and Technology E-recruitment and ATS (Applicant Tracking Systems), resume parsing, AI in hiring, video interviewing platforms, gamification in recruitment, recruitment analytics, concept of scorecards in HR, key HR metrics & KPIs, creating effective HR scorecards, applying balance scorecard in HR.	8
Unit III	Sources of Recruitment Internal & external sources of recruitment, chatbots & virtual recruiters, social media recruitment with AI integration, LinkedIn AI, blockchain for recruitment- verifying credentials & employment history.	8
Unit IV	Selection Psychological testing, types of psychological tests, projective tests vs. pen paper tests, self-report inventories, projective test, the Birkman method and MBTI® comparison, FIRO-B, 16PF, graphology, skills assessment, games and group activity for leadership assessment.	8
Unit V	HR Metrics & Emerging Trends in HR Tech Visualizing HR metrics, tools: Power BI, tableau, google data studio, AI & ML in HR analytics, predictive HR analytics, blockchain in HR, chatbots in HR services.	8

Semester/Year:	III Sem / II Year
Course Code:	25MBAH004
Title of the Course:	Strategic Human Resource and Organizational Development
L: T: P: C:	3: 0: 2: 4

Overview

This course integrates the principles of strategic human resource management (SHRM) and organization change and development to prepare MBA HR students to align people strategies with organizational goals in dynamic business environments. It explores how HR evolves from an administrative function to a strategic partner influencing long-term competitiveness. The course begins with understanding SHRM concepts, models, and the strategic role of HR in driving organizational effectiveness. Students will learn to design and implement HR strategies, linking talent management, performance systems, and analytics with business objectives. The second half of the course introduces change management and organizational development (OD), emphasizing the processes, theories, and tools that enable transformation in organizations. Learners will gain insights into change models, resistance management, OD interventions, and the role of HR as a change agent. Emerging issues such as HR analytics, digital HR, ESG integration, and the future of work are also discussed. By the end of the course, students will develop strategic thinking, analytical, and implementation skills necessary for managing human capital and leading change effectively in contemporary organizations.

Course Objectives

1. To explain the evolution, scope, and strategic importance of HRM and differentiate SHRM from traditional HRM approaches
2. To develop the ability to formulate and integrate HR strategies with business goals in a global and cross-cultural context
3. To analyse HR metrics, strategic performance systems, and data-driven HR decisions for organizational success
4. To evaluate organizational change models, OD processes, and the competencies of HR professionals in facilitating change
5. To design innovative HR and OD interventions integrating technology, sustainability, and strategic foresight for future-ready organizations

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of strategic HR & OD course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of strategic HR & OD in real-time problem-solving course
3. Demonstrate the ability of analyzing the real time problems using skill acquired by concepts, theories, models and principles of strategic HR & OD course
4. Exhibit the ability of designing and redesigning existing and new models by using the

acquired skills from concepts, theories, models and principles of strategic HR & OD in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of strategic HR & OD in real-time problem-solving course

Approach to Learning	• Lecture • Class Discussion • Case Study • Presentation • Group Discussion • Research Based Assignments • Simulation/Role Play • Industry Based Assignments / Project work • Class Quiz
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of SHRM and organizational change methods and interventions through • Industry based mini projects • Timely assignments submission • Group assignments • Group presentations • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Foundations of Strategic Human Resource Management Understanding SHRM: Concepts and evolution of SHRM, linking HRM to organizational strategy, HR's strategic role, and organizational diagnostics. An investment perspective of HRM, strategic HRM, aims of SHRM, strategic HR Vs traditional HR, challenges in SHRM, approaches and models to SHRM and the evolving strategic role of HR, barriers to strategic HR, recent trends in SHRM.	8
Unit II	HR Strategy Formulation and Integration Formulating HR strategy, criteria for an effective HR strategy, integrating the business and HR strategies: Talent strategy & global context, workforce & talent, strategic workforce planning, succession management, global HRM challenges, and cross-cultural HR.	8

Unit III	Strategic Performance and Future of SHRM Future trends in strategic HRM approaches, career management, mentoring relationship, work-life integration, stress management, strategic performance management, rewards & analytics: Designing appraisal systems, strategic compensation and benefits, performance-linked rewards, measures and metrics of HRM performance, predictive analytics for HR outcomes.	8
Unit IV	Change Management and Organizational Development (OD) Introduction to change management and OD, change stimulating forces, change agents, planned change, unplanned change, theories & models of organisational change, Lewin's three Step Model, need for change, resistance for change, history & evolution of OD, who is an OD practitioner, role of OD professional in organisations, competencies required for an OD professional, process of OD, components of OD program, phases of OD program.	8
Unit V	OD Interventions and Future HR Innovations OD interventions, human process interventions, structure and technological interventions, strategy interventions, sensitivity training, survey feedback, process consultation, team building, inter-group development, and learning organizations. Factors affecting success of interventions, HR innovation, HRIS and digital platforms, AI/VR in HR, ESG integration in HR strategy, future of work and sustainability in HR.	8

Semester/Year:	IV Sem / II Year
Course Code:	25MBAH005
Title of the Course:	International Human Resource Management and Cross-Cultural Leadership
L: T: P: C:	3: 0: 2: 4

Overview

This course on international human resource management and cross-cultural leadership equips MBA (HR) students with the knowledge and skills to manage human capital in multinational and culturally diverse organizations. It explores how globalization, technological change, and cultural diversity reshape HR policies and practices across borders. The course begins with understanding the scope, models, and strategic significance of IHRM and the cultural frameworks that influence managerial behaviour globally. Students learn about staffing approaches, expatriation and repatriation, international recruitment, and talent mobility challenges. The course further delves into international compensation and performance management systems tailored to diverse environments. Emphasis is placed on cross-cultural training, expatriate development, and leadership skills required to manage multicultural teams. The final unit highlights global labor relations, ethics, inclusion, sustainability, and emerging digital trends such as AI-driven HRM and the gig economy. By integrating strategic, cultural, and ethical perspectives, the course prepares learners to design and implement global HR strategies that foster cross-cultural collaboration, equity, and organizational success in a borderless world.

Course Objectives

1. To explain the concept, scope, and strategic importance of IHRM and examine how cultural frameworks influence global HR practices
2. To apply international staffing strategies and talent management approaches suited to diverse global contexts
3. To analyse international performance and compensation management systems considering cultural, economic, and legal differences
4. To evaluate the effectiveness of cross-cultural training and leadership development initiatives in enhancing expatriate success
5. To design sustainable and ethical IHRM strategies integrating global diversity, technology, and emerging workforce trends

Course Outcomes

After completion of this course students will be able to:	
1. Exhibit the fair understanding of concepts, theories, models and principles of international HRM and cross-cultural leadership course.	
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of international HRM and cross-cultural leadership in real-time problem-solving course.	
3. Demonstrate the ability of analyzing the real time problems using skill acquired by concepts, theories, models and principles of international HRM and cross-cultural leadership course.	
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of international HRM and cross-cultural leadership in real-time problem-solving course.	
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of International HRM and Cross-Cultural Leadership in real-time problem-solving course.	

Approach to Learning	• Lecture • Class discussion • Case study • Presentation • Group discussion • Research based assignments • Simulation/Role play • Industry based assignments / Project work • Class quiz
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of IHRM and cross-cultural strategies through • Industry based mini projects • Group assignments • Group presentations • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Foundations of International HRM and Cultural Frameworks Concept, scope, and importance of IHRM, domestic HRM vs. international HRM, drivers of internationalization of business, internationalization stages and HR challenges, role of IHRM in global business strategy, models of IHRM (Perlmutter's EPRG model, Bartlett & Ghoshal's model), impact of culture on HRM: Hofstede, Trompenaars cultural dimensions, Kluckhohn and Strodtbeck's cultural dimension, Hall and Hall's cultural dimension, globe culture frameworks.	8

Unit II	International Staffing and Talent Mobility International staffing approaches: Ethnocentric, polycentric, regio centric, geocentric, recruitment & selection criteria for international assignments, talent acquisition in multinational corporations (MNCs). Managing expatriates and inpatriates, cross-national differences in recruitment and staffing practices, international labour mobility and migration trends.	8
Unit III	International Performance and Compensation Management International performance management: Issues and approaches, cultural impact on appraisal systems, objectives of international compensation management, factors affecting international compensation, components and structure of international compensation package for expatriates: Balance sheet approach, going rate, localization, incentives, benefits, and taxation issues in different countries, managing international labour costs.	8
Unit IV	Cross-Cultural Training and Global Leadership Development Training & development of international staff, importance of cross-cultural training, expatriate training programs: Pre-departure and post-arrival training components: Cultural awareness, preliminary visits, and language skills, relocation assistance and training for trainers, types of expatriate training, sensitivity training, career development, repatriate training, skills for global managers and leaders, development of multicultural teams, knowledge transfer across subsidiaries, building global leadership pipelines.	8
Unit V	International Labor Relations, Ethics, and Emerging Issues International labor standards (ILO), employee rights & labour relations, comparative employment relations across countries (US, EU, Japan, India), global diversity, equity, and inclusion practices, HR issues in mergers, acquisitions, and joint ventures, ethical dilemmas in international HRM, role of technology, AI, and HR analytics in IHRM, emerging issues in IHRM: Remote work, gig economy, global sustainability practices, emerging trends — digital IHRM, ethics & sustainability.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAM001
Title of the Course:	Modern Marketing
L: T: P: C:	3: 0: 2: 4

Overview

This course aims to increase the ability of students to make effective marketing decisions. It overall includes assessing marketing opportunities and developing marketing strategies with implementation plans. Course topics include market-oriented strategic planning, marketing research and information systems, buyer behavior, target market selection, competitive positioning, product and service planning, management, pricing, distribution, and integrated communications. The syllabus also includes advertising, public relations, internet marketing, social media, and sales promotions. Through a combination of interactive discussions, cases, practical examples, individual assignments, and a group project, the course applies marketing topics to consumer and business-to-business products, services, and non-profit organizations. Students gain significant experience in communicating and defending their marketing recommendations and building on the ideas of others.

Course Objectives

1. To provide an in-depth understanding of modern marketing concepts, principles, and techniques essential for effective decision-making
2. To enhance students' ability to analyse consumer behaviour, segmentation, and positioning for strategic marketing
3. To develop competence in applying service marketing, retailing, and relationship marketing principles in dynamic market environments
4. To strengthen students' analytical and strategic skills for identifying market opportunities and designing actionable marketing strategies
5. To foster the ability to manage and enhance brand performance through innovative and ethical marketing practices

Course Outcomes

After completion of this course students will be able to:

1. Exhibit a fair understanding of concepts, theories, models, and principles of modern

marketing management course across retail, B2B, and services contexts	
2. Demonstrate the ability of applying the skills of concepts, theories, models and principles of modern marketing in marketing decision-making and real-time problem-solving course	
3. Demonstrate the ability of analyzing the real time marketing problems using skill acquired acquired by concepts, theories, models and principles of modern marketing management for business course to derive insightful conclusions	
4. Exhibit the ability of designing and redesigning existing and new marketing models by using the acquired skills from concepts, theories, models and principles of modern marketing frameworks for strategic and operational improvement in real-time problem-solving course	
5. Exhibit the ability of developing / redesigning existing and new marketing and branding strategies by using the acquired skills from concepts, theories, models and principles of modern marketing principles for addressing contemporary business challenges effectively in real-time problem-solving course	
Approach to Learning	● Lectures ● Readings ● Active student participation and class room exercises ● Case Analysis collaboratively with students' involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application by way of: ● Mini projects ● Submission of assignments ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Modern Marketing Foundation & Environmental Integration Evolution from traditional to tech-integrated modern marketing, contemporary marketing mix: Beyond 4Ps to experience, ethics & equity, green marketing and sustainability as brand levers, ethical marketing and corporate citizenship, strategic product mix planning and lifecycle agility, digital pricing strategies (Dynamic, subscription, bundling), omnichannel distribution, smart logistics, and retail tech platforms. Platform-based business models and ecosystem competition (Amazon, Swiggy, Uber) and their implications for modern marketing strategy.	8
Unit II	Consumer Intelligence & Research Analytics Psychological, emotional, cultural factors in consumer behaviour, journey mapping and real-time behavioural data, advanced segmentation and persona development, predictive analytics in positioning and strategy, integrated qualitative and quantitative research approaches, modern tools: Online panels, sentiment analysis, AI in market research. Privacy-aware consumer analytics and first-party data strategy in a cookie-less environment.	8
Unit III	Strategic Services & Experience Marketing Service design thinking and co-creation, digital service ecosystems and experiential differentiation, dynamic service delivery systems and automation, service pricing in platform models, brand experience mapping in services, AI-powered service personalization and feedback systems. Customer journey orchestration across multiple touchpoints using marketing automation platforms.	8

Unit IV	Tech-Driven Retail & Omnichannel Strategy Retail tech and smart store environments, digital shelf space and platform retailing, location analytics and experiential formats, mobile commerce, hyperlocal delivery models, integration of AR/VR, voice commerce in retail, customer retention and data-driven merchandising. Retail media networks and monetization of customer data within platform-based retail ecosystems.	8
Unit V	Digital-First Branding & Reputation Strategy Brand ecosystems and influencer-driven narratives, brand equity measurement using digital metrics, social branding and purpose-led campaigns, brand architecture in global and hybrid models, employer branding and corporate reputation online, managing brand communities and culture-based branding. Customer journey orchestration across multiple touchpoints using marketing automation platforms.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAM002
Title of the Course:	Rural Marketing
L: T: P: C:	3: 0:2: 4

Overview

This course explores the unique characteristics, challenges, and opportunities of marketing in rural and agricultural contexts in India. It examines rural consumer behaviour, distribution networks, rural retailing, digital penetration, and agri-business marketing strategies. The course blends theoretical frameworks with case studies, highlighting innovative rural marketing campaigns and government initiatives. Students will develop practical insights into designing, implementing, and evaluating marketing strategies tailored to rural and Agri markets, preparing them to contribute effectively to inclusive growth and rural development.

Course Objectives

1. To understand the dynamics of rural markets and rural consumer behaviour
2. To analyse rural distribution channels, retailing formats, and digital interventions
3. To evaluate strategies for agricultural input and output marketing
4. To examine case studies of successful rural marketing campaigns in India
5. To design innovative marketing strategies that address rural opportunities and challenges

Course Outcomes

1. Exhibit the fair understanding of concepts, theories, models and principles of rural marketing course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of rural marketing in real-time problem-solving course
3. Demonstrate the ability of analyzing the real time problems using skill acquired by concepts, theories, models and principles of rural marketing course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of rural marketing in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of rural marketing in real-time problem-solving course

Approach to Learning	● Interactive lectures & discussions ● Case study analysis ● Field-based projects ● Guest lectures / Practitioner insights ● Self-learning modules
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application by way of: ● Assignments ● Case study presentation ● Experiential project ● Class participation ● Mid-Semester exam ● Semester-End exam ● Capstone group project report

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Rural Market Ecosystems & Consumer Insights Ecosystem mapping of Indian rural markets: Demographics, digital reach, infrastructure gaps, rural consumer typologies: Aspirational vs. subsistence segments, comparative lens: Rural vs semi-urban vs urban hybrid consumers, evolving rural behaviour: Social commerce, media penetration, mobile-first habits, participatory rural research models (PRA, PAR), using AI and digital tools for rural consumer insights. Role of vernacular content, voice interfaces, and regional language platforms in influencing rural consumer engagement.	8 hours
Unit II	Rural Distribution Strategy & Infrastructure Omnichannel strategies for rural markets, Haats to hyperlocals: Transformation of rural sales points, distribution models for Agri and FMCG in Tier-III & IV regions, last-mile logistics, Public-private partnership (PPP) models and micro-entrepreneur networks (e.g., rural delivery partners, village-level entrepreneurs) in last-mile distribution and e-commerce enablement, role of SHGs, FPOs, and cooperatives in supply chain, technology enablement: Drones, mobile apps, rural fintech.	8 hours
Unit III	Agro Value Chains & Rural Enterprise Development value chain mapping for agriculture, horticulture, and non-farm products, farm-to-fork branding and direct marketing models (e-NAM, FPO, Uzhavan App), agrochemical markets: Sustainability, safety, and awareness campaigns, reviving crafts and artisan sectors: Design, finance, and global trade linkages, Govt. schemes: PM Fasal Bima Yojana, SFURTI, ODOP, geographical Indication (GI) products and their role in rural branding and global market access.	8 hours

Unit IV	Digital Disruption and Financial Inclusion in Rural India Fintech, Insurtech, and Agri-tech adoption in rural India, Digital payment ecosystems: UPI, Aadhaar-enabled services, edtech and health tech in rural transformation, case studies: DeHaat, KisanKonnnect, Jai Kisan, Agrowave, role of startups and digital public infrastructure in inclusion, digital literacy challenges and trust barriers affecting technology adoption in rural communities.	8 hours
Unit V	Integrated Agricultural Marketing & Policy Agricultural market reforms and farmer-market linkage, MSP, e-NAM, APMC act reforms, warehouse-based receipts, Agri-financing models, price discovery and contract farming, value-added services and agro advisory systems, state vs central schemes impact benchmarking (e.g. RKVY, PMKSY), Climate risk, sustainability, and climate-resilient agricultural marketing strategies.	8 hours

Semester/Year:	III Sem / II Year
Course Code:	26MBAM003
Title of the Course:	Digital Marketing
L: T: P: C:	3: 0:2: 4

Overview

This course introduces the principles, strategies, and tools of digital marketing in the contemporary business environment. It explores search engine marketing, social media strategies, mobile and content marketing, influencer marketing, and performance measurement tools. The course blends theory with practice through case studies, simulations, and projects, enabling students to design and implement effective digital marketing campaigns. Students will also examine ethical, legal, and data privacy considerations, preparing them for real-world challenges in managing online consumer engagement and brand reputation.

Course Objectives

1. To understand the fundamentals and evolving trends of digital marketing
2. To analyse digital consumer behaviour and online buying decision-making
3. To apply tools and platforms for search, social, content, mobile, and influencer marketing
4. To design and manage integrated digital campaigns with measurable ROI
5. To evaluate ethical and legal frameworks, including data privacy and compliance, in digital marketing

Course Outcomes

1. Exhibit the fair understanding of concepts, theories, models and principles of digital marketing course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of digital marketing in real-time problem-solving course
3. Demonstrate the ability of analyzing the real time problems using skill acquired by concepts, theories, models and principles of digital marketing course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of digital marketing in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of digital marketing in real-time problem-solving course

Approach to Learning	● Interactive lectures & discussions ● Case study analysis ● Hands-on digital simulations ● Guest talks / Practitioner insights ● Self-learning modules
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application by way of: ● Assignments ● Case study presentation ● Action-based project ● Class participation ● Mid-Semester exam ● Semester-End exam ● Capstone group project report

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Foundations of Digital Marketing Strategy Evolution and strategic role of digital marketing in business, traditional vs digital vs hybrid approaches, digital ecosystems: Owned, paid, earned media, consumer journey in a digital context (zero moment of truth), global and Indian digital marketing landscape, future readiness: AI, voice, blockchain, metaverse, and immersive tech. Digital trust and privacy frameworks: First-party data strategies, cookie-less marketing, and evolving data protection regulations.	8 hours
Unit II	Web Experience & Content Strategy Building user-centric websites (UX/UI, mobile-first design), SEO-optimized content structure and technical SEO, CMS mastery (WordPress, web flow, shopify basics), content funnelling (TOFU, MOFU, BOFU), visual storytelling, video branding, podcasts, AI tools in content creation (ChatGPT, canvas AI, synthesis), Content personalization using user behaviour data and dynamic content delivery. Scalability of technology, limitations of automation.	8 hours
Unit III	Performance Marketing & Search Mastery On-page, off-page, and technical SEO best practices, SEM strategy and google Ads campaign design, display, search, video, shopping ad formats, performance metrics: ROAS, CPA, quality score, remarketing strategy and google tag manager overview, integration with google analytics 4 (GA4), economic and organizational impact of social media tools. Budget optimization and bid automation using AI-driven performance management tools.	8 hours

Unit IV	Integrated Social Media & Influencer Strategy Platform-specific strategies (Meta, LinkedIn, X, Instagram, YouTube shorts, threads), social listening, storytelling, brand persona building, paid vs organic tactics, influencer identification, Micro- and nano-influencer strategies and community-led brand advocacy, real-time marketing and virality frameworks, tools: Buffer, Hootsuite, meta business suite, creator studio, campaign ROI and social media analytics.	8 hours
Unit V	Data-Driven Digital Campaigns GA4, heatmaps, funnel & cohort analysis, campaign dashboards: KPI tracking, ROI, attribution models, email automation, drip campaigns (Mailchimp, SendGrid), SMS & push notifications, WhatsApp for business, mobile-first ad strategy, intro to AI-enabled predictive analytics marketing experimentation frameworks: A/B and multivariate testing for continuous campaign optimization.	8 hours

Semester/Year:	III Sem / II Year
Course Code:	26MBAM004
Title of the Course:	Integrated Marketing Communications
L: T: P: C:	3: 0: 2: 4

Overview

This course examines the role of integrated marketing communication (IMC) in the digital era, with a focus on the strategic alignment of brand, messaging, and media. It covers modern advertising and media strategies, AI-driven ad planning, and cross-platform storytelling. Students will learn engagement marketing, PR 4.0, and influencer advocacy, alongside technology-driven direct and digital tools such as automation, CRM sync, and personalisation at scale. Ethical and regulatory aspects (DPDP, GDPR) are integrated throughout. Case studies and projects prepare students to design and evaluate full-funnel IMC campaigns with global relevance.

Course Objectives

1. To understand the evolving role of IMC in the digital era and its strategic alignment with brand objectives
2. To analyse modern advertising, media strategies, and technology-driven tools for integrated campaigns
3. To design engagement strategies that include PR 4.0, influencer relations, CRM-linked promotions, and experiential marketing
4. To apply data-driven approaches, automation, and AI for omnichannel and personalized IMC campaigns
5. To develop, execute, and evaluate full-funnel IMC strategies with measurable outcomes and cross-border applicability

Course Outcomes

1. Exhibit a clear understanding of the principles, concepts, and strategic role of Integrated Marketing Communication (IMC) in creating unified and consistent brand experiences across multiple channels.
2. Demonstrate the ability to apply modern advertising and media strategies, including AI-enabled planning and cross-platform communication frameworks, to enhance campaign effectiveness.
3. Exhibit the ability to design integrated engagement and PR 4.0 strategies by leveraging influencer marketing, experiential campaigns, and CRM-linked customer relationship initiatives.
4. Demonstrate the capability to evaluate technology-driven direct and digital engagement platforms such as marketing automation, chatbots, and omnichannel orchestration tools to improve customer interaction and personalization.
5. Exhibit the ability to develop and manage full-funnel IMC campaigns by integrating creative strategy, performance analytics, and cross-border communication to achieve measurable marketing outcomes.

Approach to Learning	● Interactive lectures & discussions ● Case study analysis ● Group projects ● Guest talks / Practitioner insights ● Self-learning components
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application by way of: ● Assignments ● Case study presentations ● Experiential project ● Class participation ● Mid-Semester exam ● Semester-End exam ● Capstone group project report

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Foundations and Strategy of IMC Integrated marketing communication in the digital era, strategic alignment of brand, messaging, and media, role of IMC in omnichannel brand experience, communication objectives, KPI alignment, and ROI planning, regulatory frameworks, data ethics, digital compliance (DPDP, GDPR). First-party data strategy and customer identity resolution for privacy-compliant integrated communication.	8 hours
Unit II	Modern Advertising & Media Strategy Paid, owned, and earned media integration, AI in ad planning: Personalisation, programmatic ads, content-based and context-based targeting, cross-platform storytelling (Traditional + digital), media buying, media mix modelling, attention metrics and viewability standards for evaluating digital media effectiveness, budget optimisation.	8 hours
Unit III	Engagement Marketing and PR 4.0 Experiential marketing and guerrilla campaigns, influencer relations, brand advocacy and micro-communities, CRM-linked promotions and loyalty programs, digital PR, social crisis management, online reputation tools, sponsorship analytics, and CSR-linked brand equity. Employee advocacy and internal branding as extensions of integrated communication.	8 hours

Unit IV	Technology-Driven Direct & Digital Engagement Integrated campaign design: Email, WhatsApp, SMS, app push, automation and AI in direct marketing (Chatbots, CRM sync), omnichannel orchestration tools (e.g., Zoho, HubSpot), integrated customer data platforms and permission marketing, dynamic creatives and personalisation at scale. Customer journey orchestration and real-time decisioning using AI-driven marketing automation.	8 hours
Unit V	Holistic IMC Planning, Execution & Evaluation Full-funnel campaign architecture: Brand awareness to conversion, creative brief development and design thinking integration, campaign dashboards and performance metrics (ROAS, lift, attribution), IMC in cross-border brand communication, real-world IMC case mapping (Nike, Tanishq, Dove, Amul). Marketing experimentation frameworks: A/B testing and incrementality testing for campaign effectiveness.	8 hours

Semester/Year:	IV Sem / II Year
Course Code:	26MBAM005
Title of the Course:	Strategic Global Marketing & Distribution
L: T: P: C:	3: 0: 2: 4

Overview

This course examines the strategic role of global marketing and distribution in a digital-first economy. It introduces comparative models of international, multinational, and transnational marketing while analysing Globalisation 4.0 drivers such as AI, fintech, and sustainability. Students will apply PESTLE, Porter's Five Forces, and digital tools to study market environments and consumer behaviour. The course also addresses AI-driven logistics, blockchain, outsourcing, and cross-border trade compliance. With emphasis on ESG, digital sovereignty, and crisis management, students will develop future-ready global marketing strategies.

Course Objectives

1. To understand the strategic role of global marketing in a digital-first economy and the evolution toward AI-driven commerce
2. To analyse global market environments using PESTLE, digital macro-environment tools, and AI-enhanced market intelligence
3. To evaluate and design effective global market entry and distribution strategies leveraging AI, blockchain, and sustainability principles
4. To critically assess emerging global issues, including ESG imperatives, digital sovereignty, and trade compliance
5. To develop leadership and decision-making skills to navigate crises and future-ready global marketing challenges

Course Outcomes

1. Exhibit a clear understanding of the evolution, scope, and strategic importance of Global Marketing, including domestic, international, multinational, and transnational marketing models.
2. Demonstrate the ability to analyze global market environments using PESTLE, Porter's Five Forces, and AI-enabled market intelligence tools to identify opportunities, threats, and strategic risks.
3. Exhibit the ability to formulate appropriate global market entry, product innovation, positioning, and pricing strategies by leveraging digital technologies and AI-driven decision frameworks.
4. Demonstrate the capability to evaluate and design technology-enabled global distribution and supply chain strategies, incorporating blockchain, outsourcing models, and sustainability considerations.
5. Exhibit the ability to critically assess contemporary global challenges such as ESG compliance, digital sovereignty, geopolitical risks, and crisis situations to develop future-ready global marketing leadership perspectives.

Approach to Learning	• Interactive lectures & discussions • Case study analysis • Group projects • Guest lectures / Practitioner insights • Self-learning components
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application by way of: • Assignments • Case study presentations • Experiential project • Class participation • Mid-Semester exam • Semester-End exam • Capstone group project report

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Strategic Role of Global Marketing Strategic role of global marketing in a digital-first economy, evolution from domestic trade to AI-driven global commerce, comparative perspectives: Domestic, international, multinational, and transnational marketing models, globalisation 4.0 drivers including AI, fintech, sustainability, emerging challenges such as ESG compliance and data privacy, WTO framework, regional blocs (EU, ASEAN, AfCFTA, USMCA, RCEP), digital trade accords. Role of platform-based global business models (Amazon Global, Alibaba, Shopify) and digital ecosystem strategies in international market expansion.	8 hours
Unit II	Global Market Environment and Intelligence PESTLE + Digital macro-environment analysis, Porter's five forces, AI-enhanced market intelligence, data sources from big data, IoT, and predictive analytics, cross-cultural consumer behaviour analysis, use of social listening and sentiment analytics for real-time global consumer insights. Relevant trade rules, ethics in global data handling.	8 hours
Unit III	Global Marketing Strategies in the Digital Era AI-based market entry evaluations, hybrid market presence (digital + physical), global product innovation and customisation, dynamic pricing algorithms and currency risk management, omnichannel promotion and global e-commerce platforms. Global customer experience management (CX) and personalization across diverse cultural and regulatory environments.	8 hours

Unit IV	Technology-Driven Global Distribution and Supply Chain AI-optimised logistics, blockchain for transparency, green logistics and sustainability, cross-border e-commerce fulfilment, last-mile delivery innovations and localized fulfilment strategies in international markets. Outsourcing models in global distribution, digital-era trade compliance.	8 hours
Unit V	Contemporary Issues and Future-Ready Leadership AI, AR/VR, and metaverse in branding, ESG imperatives, digital sovereignty, crisis management in global contexts, future-ready leadership. Managing geopolitical risks and regulatory uncertainty in global digital markets.	8 hours

Semester/Year:	III Sem / II Year
Course Code:	26MBAI001
Title Of the Course:	Enterprise IT Systems and Applications
L: T: P: C:	3: 0: 2: 4

Overview

For the modern businesses operating in a competitive economy, the key requirements to succeed are operational efficiency, customer focus, agility, employee retention, financial prudence etc. Creative adoption of information technology tools and solutions to digitalize the business functions and processes is an essential ingredient to achieve the above elements. For managers / entrepreneurs a deep knowledge of information technology systems and solutions available for each business function, in the form of enterprise applications is essential. The tools available, technology trends, the key features, how these tools are effective, how to automate the business processes using these tools, how to use the right tools for the organization, etc. are extremely important to be effective in their role. This course intends to enhance the skill of managers/entrepreneurs by providing a holistic understanding of enterprise resource planning and related functional systems for smooth functioning of an enterprise.

Course Objectives

1. To provide deep understanding of enterprise resource planning and related functional systems and processes in a digital economy
2. To choose and use the right solutions to meet the IT specific functional needs of a modern business enterprise
3. To examine the importance of the applications of ERP in terms of sales, marketing, finance & accounting, customer relationship management, human resource management and supply chain management
4. To discuss all of the above in the context of readiness of an enterprise for implementation of an ERP
5. To select an ERP and steps involved in the process of implementation

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of enterprise applications and their critical role in business enterprises in the enterprise IT systems and applications course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of enterprise technology solutions for selecting and using appropriate systems in the enterprise IT systems and applications course.
3. Demonstrate the ability of analyzing real-time problems using skill acquired by concepts, theories, models and principles of ERP functional modules such as sales and marketing, finance and accounting, CRM, SCM, and HR in the enterprise IT systems and applications course.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of enterprise readiness and ERP implementation strategies in the enterprise IT systems and applications course.

5. Exhibit the ability of developing or redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of ERP implementation methodologies in the enterprise IT systems and applications course.

Approach to Learning	• Lectures • Readings • Active student participation and class room exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of IT practices by way of: • Mini projects • Submission of assignments • Group assignments • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to ERPs Introduction to ERPs, digital transformation using ERP, business process reengineering (BPR), functional architecture of an enterprise, business functions and business processes. Integrated management information systems, scope and benefits, evolution of ERPs; ERP implementation, post implementation options. Self-exploration of SAP S/4HANA and Oracle Cloud ERP.	7
Unit II	The Development of Enterprise Resource Planning Systems Evolution of information systems, bespoke and commercial off the shelf (COTS) systems, cloud-based ERPs. Key ERP systems and their evolution, SAP R/3, PeopleSoft, Oracle. ERPs for small and medium enterprises. ERP implementation life cycle. Choosing and ERP and consulting partner. Relevant case studies of implementation of SAP R/3, Peoplesoft, Oracle.	8

Unit III	Marketing Information Systems and Sales Order Process, Customer Relationship Management Unintegrated marketing and sales processes, problems with Fitter snackers 'sales processes, integration of ERP with digital marketing platforms (Such as salesforce). Sales & distribution processes in an ERP, presales activities, sales order processing, inventory sourcing, delivery, billing and payment, a standard order in SAP ERP. Customer relationship management: Core CRM activities, SAPs CRM software and benefits of CRM systems, omni-channel CRM strategy in ERP, e.g. Salesforce CRM. CRM implementation in e-commerce firms (Nykaa or Flipkart), self-exploration.	10
Unit IV	Production and Manufacturing Production overview through a case study, Fitter's production & manufacturing processes and issues. Production planning process and SAP's approach, sales forecasting, operations planning, demand management, material requirements planning (MRP), bill of materials, lead times & lot sizing. Industry 4.0 integration with ERP: Smart manufacturing, IoT enabled production. Material requirements planning in SAP R/3.	7
Unit V	Accounting Systems and Human Resource Management Systems Accounting activities and using and ERP for accounting information system. Operational decision making through accounting information systems, credit management, product profitability analysis, inventory cost accounting, management reporting using ERPs, case studies such as collapse of Enron. Human resource management processes within ERPs, recruitment management, time management, payroll processing, travel management, training and development, performance management via ERP, administration of employee leaves, self-service ERP portals, relevant case studies.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAI002
Title Of the Course:	Business Technologies
L: T: P: C:	3: 0: 2: 4

Overview

Successful business models in the current times are based on the IT strategy of an organization. Some of the most successful new age enterprises have their business strategy entirely driven by information technology. New age business technologies have rapidly transformed the business landscape and competition. Businesses, which do not adapt to rapidly transformation in technology, lag behind or cease to exist. Therefore, it is imperative that new age business management professionals have a conceptual understanding and know-how some of the new age technologies are transforming the business landscape in the current.

Course Objectives

1. To learn about the contemporary technologies those are transforming the business landscape
2. To learn the business applications of contemporary technologies
3. To get a general understanding of tools and platforms used in the implementation of new age technologies
4. To understand the associated risks and mitigation in the implementation of new technologies
5. To understand the future applications of the new technologies

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of contemporary business technologies used for problem-solving in the business technologies course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of business applications for effective decision-making in the business technologies course.
3. Demonstrate the ability of analyzing real-time problems using skill acquired by concepts, theories, models and principles of emerging technologies transforming businesses in the business technologies course.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of technology risk assessment and mitigation strategies in the business technologies course.
5. Exhibit the ability of developing or redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of technology integration and solution design in the business technologies course.

Approach to Learning	● Lectures ● Readings ● Active student participation and class room exercises ● Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of IT practices by way of: ● Mini projects ● Submission of assignments ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to Business Technologies Introduction to following technologies: Cloud Computing, blockchain, robotic process automation (RPA), internet of things (IoT), cyber security, virtual and augmented reality (AR/ VR), artificial intelligence and machine learning (AI/ ML), generative AI basics and business use cases, digital twins, evolution of technologies, the need in the industry for these technologies, future landscape and core theoretical concepts related to each technology. Augmented reality and virtual reality, concept of AR and VR, the difference between the two, underlying concepts, business application using a case study.	7
Unit II	Cloud Computing, Cyber Security Introduction to cloud computing and the need, cloud computing concepts: Containers, micro services, big data and analytics, cloud security, cloud migration, public and private cloud. Cloud computing on amazon web services (AWS), cloud computing on Azure (Microsoft Cloud), google cloud platform. Cyber security: Introduction to information security, protecting computer systems and network, identification of threats, attacks, intrusion etc. Malware, phishing, denial-of-service, password attacks, ransom-ware and its prevention, tools and technology for cyber security, introduction to cryptography and its application in securing data. Zero trust architecture (ZTA) and its basics. Cyber security compliance frameworks, Overview of GDPR, ISO 27001, and Indian regulations like CERT-IN guidelines.	10

Unit III	Blockchain, Internet of Things (IoT) What is Blockchain, difference between database and block chain, concept of distributed ledger, architecture of a blockchain, cryptography and hashing, intermediaries, blockchain transaction mechanism, crypto currencies – An application of blockchain. Smart contract, enterprise application of blockchain such as in supply chain and other functions. Internet of things (IoT), core concepts, benefits, future of IoT, business application. Edge computing, processing data closer to the source (e.g., IoT devices), reducing latency and improving performance.	8
Unit IV	Robotic Process Automation Robotic process automation, underlying concepts, popular tools & platforms (Ui path), benefits of RPA, issues in implementation, business application using a case study. RPA assignment using Ui path. Introduction to intelligent automation combining AI and RPA.	7
Unit V	Machine Learning & Artificial Intelligence Artificial intelligence and machine learning, core concepts, benefits, future of AI, business application. Introduction to generative AI (GenAI) and its role in content creation, chatbots, and automation. Understanding responsible AI and ethical concerns like bias and data privacy.	8

CO- PO Mapping

	PO1	PO2	PO3	PO4	PO5	PSO1	PSO2	PSO3	PSO4
CO1	2	2	1	1	2	2		3	2

Semester/Year:	III Sem / II Year
Course Code:	26MBAI003
Title of the Course:	Program and Project Management, Customer Services Management
L: T: P: C:	3: 0: 2: 4

Overview

This course introduces students to the fundamentals of software development and IT project management, which are critical for managing modern enterprises. It equips students with the ability to understand software processes, frameworks, and methodologies, enabling them to make informed decisions regarding technology adoption. The course covers key elements such as software development, project management practices, quality and risk management, and IT service management frameworks. By bridging the gap between technology and business, the course prepares students to align IT solutions with organizational goals, ensuring efficiency, innovation, and long-term sustainability in dynamic business environments.

Course Objectives

1. To understand the fundamental principles of software development methodologies, processes, and frameworks
2. To gain knowledge of project management concepts, frameworks, and emerging trends in IT projects
3. To analyse project integration and scope management processes by identifying dependencies, constraints, and deliverables
4. To evaluate tools and practices in software development, testing, and IT service management
5. To develop the ability to design strategies for digital project delivery and continual service improvement

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of software processes, development methodologies, and frameworks including requirement engineering, design, testing, and implementation in the program and project management, customer services management course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of project management knowledge areas and process groups for effective IT project planning and execution in the program and project management, customer services management course.

3. Demonstrate the ability of analyzing real-time problems using skill acquired by concepts, theories, models and principles of project integration and scope management to identify dependencies, constraints, and deliverables in the program and project management, customer services management course.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of project quality, risk, and resource management to enhance IT project outcomes in the program and project management, customer services management course.
5. Exhibit the ability of developing or redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of IT service management strategies and ITIL frameworks for service strategy, transition, operation, and continual improvement in the program and project management, customer services management course.

Approach to Learning	● Lectures ● Readings ● Active student participation and class room exercises ● Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application by way of: ● Mini projects ● Submission of assignments ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to Software Development and Software Development Methodology Introduction to software, software processes, software framework, software development methodology, requirement engineering, documentation, software configuration and change management, structured analysis & design, software architecture, software testing and implementation.	8
Unit II	Software Project Management Introduction to program and project management, PMI and its role. Recent trends affecting information technology project management, project management process groups - Initiating, planning, executing, monitoring and controlling, and closing.	8
Unit III	Project Integration Management and Scope Management Project integration management main processes, developing the project charter, developing the project management plan, directing and managing project work, monitoring and controlling project work, performing integrated change control, closing the project. Scope management plan, define scope management, collect requirements, define scope, create WBS, validate scope and control scope. Planning, developing and controlling schedule.	8

Unit IV	Project Quality, Risk Management and Resource Management Project Quality- Planning, managing and controlling quality, tools and techniques, cost of quality. Project risk management – Planning, identifying and responding to risks. Sources of risks. Project Resource Management – Importance, managing project teams, skills for managing teams.	8
Unit V	Information Technology Services Management (ITSM) and Cyber Law IT services management framework and concepts - ITIL framework, service strategy, service design, service transition, service operation, and continual service improvement. Cyber law, Cybercrime - Technical issues, legal issues, penalty under IT Act, digital signatures: Certificates, E-governance in India, IT Act 2000, jurisdiction under IT Act 2000.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAI004
Title of the Course:	Startup And Product Development
L: T: P: C:	3: 0: 2: 4

Overview

This course explores the evolution of Indian markets, the dynamics of disruption, and the critical role of social enterprises in shaping sustainable growth. It provides an integrated understanding of sectoral innovations across fintech, edtech, health tech, and Agri tech, while highlighting changing consumer behaviour and competitive strategies. Students will learn the fundamentals of innovation, entrepreneurship, and new business creation, including product lifecycles, business models, and scaling strategies. Intellectual property protection and funding mechanisms are emphasized to build resilience in dynamic markets. By blending theory with practice, the course equips learners with tools to innovate, adapt, and thrive in India's fast-changing business ecosystem.

Course Objectives

1. To examine India's market evolution from liberalization to the digital era and its key drivers
2. To analyse sectoral innovations and their impact on industries and consumer behaviour

3. To understand the principles of innovation, entrepreneurship, and the software product lifecycle
4. To explore intellectual property protection and its importance in new business creation
5. To develop strategies for building, funding, and sustaining enterprises in dynamic market environments

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of market evolution and drivers of change in the startup and product management course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of sectoral innovation and market dynamics in the startup and product management course.
3. Demonstrate the ability of analyzing the real-time problems using skill acquired by concepts, theories, models and principles of innovation models and entrepreneurial practices in the startup and product management course.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of intellectual property management and product scalability in the startup and product management course.
5. Exhibit the ability of developing or redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of enterprise strategy, funding, and sustainability in the startup and product management course.

Approach to Learning	● Lectures ● Readings ● Active student participation and class room exercises ● Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of IT practices by way of: ● Mini projects ● Submission of assignments ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Market Evolution, Dynamics and Role of Social Enterprise in India Understanding market evolution and disruption, overview of India's economic transformation from liberalization to digital age, key drivers: Technology, demographics, regulatory reforms, and consumer shifts, sectoral innovation: Fintech, edtech, health tech, Agri tech, changing market dynamics and competitive landscape, rise of new consumer segments and changing purchasing behaviors, market shifts: Consolidation, niche startups, local vs. global brands, role of social enterprise, sustainability, and circular economy in India.	6
Unit II	Introduction to Innovation & Fundamentals of New Business Creation Terminology and key definitions of innovation, successful innovative companies, models of innovation, success factors for innovation, game changing innovations in the software industry, entrepreneurship and innovation.	6
Unit III	Typical Software Product Lifecycle Ideation, market opportunity identification, business model canvas, MVP and MDE, productization, customer acquisition and scaling the business, product decline and new product creation. Understanding platforms – Explore what platforms are, their functions, and importance in today's digital economy. Considerations when developing a new product development strategy. Types of services and services innovations.	6
Unit IV	Intellectual Property Protection Types and key features of intellectual property, importance of intellectual property protection, intellectual property law.	6
Unit V	Building Your Company Essential team composition, securing, funding and managing cash flows, mergers and acquisitions, surviving downturns and changing market dynamics.	6

Semester/Year:	IV Sem / II Year
Course Code:	26MBAI005
Title of the Course:	Fundamentals of AI, Machine Learning & RPA
L: T: P: C:	3: 0: 2: 4

Overview

This course is designed to enable students to understand the fundamentals of artificial intelligence (AI), business analytics, and robotic process automation (RPA). All three areas are highly relevant in today's industry and have a significant impact on business operations. The course introduces fundamental AI techniques along with their practical business applications. Business Analytics is covered from a user perspective, focusing on

practical understanding with minimal theory, using popular tools to illustrate concepts. Similarly, the course introduces robotic process automation, highlighting how RPA delivers efficiencies in business processes, and provides hands-on exposure to standard RPA tools.

Course Objectives

1. To learn the fundamentals of neural networks, machine learning, deep learning and natural language processing
2. To understand and apply AI techniques to simple and illustrative industry problems
3. To understand data collection, data warehousing, reporting, visualization
4. To derive insights using BA tools such as micro strategy
5. To obtain a basic understanding of the importance and business impact of RPA and development automations using UiPath or Blue Prism

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of artificial intelligence techniques and their business relevance in the fundamentals of AI, machine learning & RPA course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of artificial intelligence for solving business problems in the fundamentals of AI, machine learning & RPA course.
3. Demonstrate the ability of analysing real-time problems using skill acquired by concepts, theories, models and principles of data warehousing and ETL tools for building business data repositories in the fundamentals of AI, machine learning & RPA course.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of data visualization, reporting, and dashboard analytics in the fundamentals of AI, machine learning & RPA course.
5. Exhibit the ability of developing or redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of robotic process automation for business process optimization in the fundamentals of AI, machine learning & RPA course.

Approach to Learning	● Lectures ● Readings ● Active student participation and classroom exercises ● Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of IT practices by way of: ● Mini projects ● Submission of assignments ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	AI for Business Users in Enterprises AI for business users in enterprises, the meaning behind common AI terminology including neural networks, machine learning, deep learning, and data science, building machine learning and data science projects, using AI for business problems and defining the AI roadmap to help your company, collaborating with your IT team to get the best out of AI, practical limitations and capabilities of AI, AI ethics and responsible AI use in business, generative AI and business use cases, no-code/low-code AI tools for business users.	8
Unit II	Data Warehousing Basics Data warehousing basics, data collection and data quality, schema design and modelling techniques, OLTP and ETL, dimensions and views, partitioning and parallelism, change data capture for a data warehouse, cloud data warehousing platforms (e.g., Snowflake, google big query, AWS redshift), security and access control in data warehousing.	8
Unit III	Theoretical Understanding of Data Analytics Theoretical understanding of data analytics, probability and statistics, regression analysis, time series forecasting, predictive analytics, prescriptive analytics, optimization and simulation modelling, analytics maturity models and analytics-driven culture in enterprises, analytics in strategic planning and competitive intelligence, analytics use in ESG and sustainability reporting.	8
Unit IV	Dash-boarding, Creating and Deriving Insights Dash-boarding, creating and deriving insights, data visualization using standard tools, creating meaningful reports, deriving insights and inferences from reports, common dashboard pitfalls and how to avoid them, mobile-first dashboarding and real-time alerts.	8
Unit V	Robotic Process Automation (RPA) Robotic process automation, introduction to RPA, commonly solved problems using RPA, RPA implementation lifecycle and governance, ethical, legal, and compliance aspects of RPA, UiPath certification - Automation starter, hands-on exercises using RPA tools.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAS001
Title Of the Course:	Logistics & Supply Chain Design
L: T: P: C:	3: 0: 2: 4

Overview

Logistics and supply chain design is a specialized MBA course that examines the strategic

configuration and orchestration of supply networks in an increasingly interconnected and volatile world. Over the semester, students engage with frameworks for designing resilient, cost-effective, and responsive systems that span procurement, production, distribution, and reverse logistics. The course integrates analytical modelling with real-world case studies to explore trade-offs in network design, transportation modes, inventory placement, and sourcing strategies. Emphasis is placed on aligning supply chain architecture with business strategy, customer expectations, and sustainability imperatives, while navigating risks, disruptions, and digital transformations. By cultivating both systemic insight and operational acuity, the course prepares future leaders to shape supply chains as engines of competitive advantage and adaptive capacity.

Course Objectives

1. To analyse and design supply chain networks that optimize cost, responsiveness, and resilience across global contexts
2. To evaluate logistics strategies and transportation systems to enhance flow efficiency and customer service levels
3. To apply quantitative models and decision tools for inventory management, sourcing, and distribution planning
4. To assess the impact of digital technologies and sustainability imperatives on supply chain design and performance
5. To integrate supply chain decisions with broader business strategy, navigating trade-offs and stakeholder priorities

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of logistics & SC design.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of logistics & SC design in real-time problem-solving course.
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of logistics & SC design course.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of logistics & SC design in real-time problem-solving course.
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of logistics & SC design in real-time problem-solving course.

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement • Visual presentation
Assessment Strategy	Participants will be assessed on both conceptual understanding and applications of OM Tools by way of: • Case study discussions & solving mini projects • Submission of assignments and individual presentation • Group presentation • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Supply Chain Design & Network Strategy Principles of supply chain network design - Objectives and components, strategic vs tactical design decisions - Risk, resilience, and sustainability in network strategy, nearshoring vs offshoring vs reshoring strategies, tax, tariff, and geopolitical considerations, risk mapping and mitigation frameworks, collaborative supply chain planning.	8
Unit II	Supply Chain Coordination Foundations of supply chain coordination, supply chain information system – EDI and other tools, information sharing and visibility, collaborative planning and decision-making platforms, VMI & consignment stock policies, incentive alignment and contract design, SC coordination in context of Indian MSMEs.	8
Unit III	Logistics and Transportation in Global Supply Chain Cross-border trade, international supply chain operations, storage & handling – Domestic and overseas consignments, risk management, logistics and transportation practices in India (Domestic and international trade) – Documentation and procedures.	8
Unit IV	Transportation Planning & Shipments in Global Supply Chain Modes of transport and the role of intermediaries, contracts & agreements in international trade, INCOTERMs, terms of payment/currencies & managing transaction risks, trade & transportation documents, insurance & risk management, domestic and overseas shipments, documentation and custom clearance procedures.	8

Unit V	Sustainable Logistics Foundations of sustainable logistics, sustainable transportation and mobility solutions, circular economy and reverse logistics, strategic logistics planning and operations research (Game-theoretic approaches - bullwhip effect mitigation, and scenario-based planning for disruptions), scenario planning and resilience modelling (Simulation and heuristics for dynamic logistics environment and risk mitigation).	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAS002
Title Of the Course:	Advance Inventory & Warehousing Management
L: T: P: C:	3: 0: 2: 4

Overview

Managing inventory effectively is key to the success of a manufacturing or sales/distribution organization. The cost of holding inventory is challenging to manage if the availability of materials is ensured at all times. Other than inventory management, students should also be aware of the warehousing operations and facility planning, and the core of green and sustainable supply chain. This course covers the commonly used methodology for optimizing inventory levels.

Course Objectives

1. To explain key terminology and concepts in inventory management and the mathematics of calculating various key parameters
2. To use industry standard inventory control and planning tools
3. To review warehouse operations and management of inventory lifecycle (From receipt to issues, returns) and inventory issuance policies
4. To learn about green and sustainable supply chain
5. To practice the elements of data collection, demand and supply planning, pre-executive and executive meetings as part of S&OP process

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of adv inventory and warehouse management
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of adv inventory and warehouse management in real-time problem-solving course
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of adv inventory and warehouse management course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of adv inventory and warehouse management in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of adv inventory and warehouse management in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement • Visual presentation
Assessment Strategy	Parti Participants will be assessed on both conceptual understanding and applications of inventory and warehouse management tools by way of: • Case study discussions & solving mini projects • Submission of assignments and individual presentation • Group presentation • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	In Inventory Control and Management Types and classification of inventory, importance of inventory management and challenges involved in it including conflicting goals, cost of carrying inventory, shelf-life challenges and storage costs, inventory related costs and economic order quantity with uncertainties in lead times.	8
Unit II	I Inventory Performance Management Variability in demand and supply and impact on inventory, popular inventory management methods and KPIs, ABC classification, cycle counting and inventory valuation (LIFO, FIFO, HIFO), waste handling, pilferage and obsolescence management through intelligent warehousing and fulfilment.	8
Unit III	Adv Warehouse Management Design of distribution network, size and location of warehouse, automated and mechanical handling systems for inventory movement, inbound and outbound operations, cross-docking and direct shipping, kanban, JIT, and consignment stock management, free, bonded and custom clearance warehousing.	8
Unit IV	Green and Sustainable SCM Foundations of green and sustainable SCM, design for environment (DFE) and cradle-to-cradle models, material selection and packaging sustainability, extended producer responsibility (EPR), GHG accounting in supply chain, regulatory compliance and ESG integration (ISO 14000, CDP, SDGs).	8

Unit V	Sales & Operations Planning (S&OP) Contrast to traditional & siloed approach to distribution planning, key drivers for master planning, conducting pre-S&OP & S&OP meetings, understanding S&OP, implementing S&OP.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAS003
Title Of the Course:	Procurement, Supply Chain Planning, & Scheduling
L: T: P: C:	3: 0: 2: 4

Overview

The course is designed to provide students an understanding of sourcing and procurement. Procurement of material plays a great role in the efficient functioning of a supply chain for any company. There are a fair number of complexities and challenges involved in carrying out procurement in time without overshooting budgets. The course covers the procedural aspects of procurement at a tactical level as well as strategic sourcing, vendor selection included in strategic relationship management. Vendor performance and review are critical for a company to make/alter sourcing decisions and the course will cover this aspect as well.

In addition, manufacturing planning and execution at scale is complex and production of a mix of products within a given time horizon with limited machines and labour resources is a daunting task. Modern software systems provide these capabilities. The course will help students appreciate these complexities; use excel based planning to gain a hands-on understanding of planning an entire factory and re-plan based on changes in requirements.

Course Objectives

1. To understand and evaluate procurement strategies across global and local sourcing contexts, balancing cost, quality, and risk
2. To design supply-side planning frameworks that integrate demand signals, capacity constraints, and supplier capabilities
3. To apply scheduling techniques and optimization models to align production, procurement, and logistics timelines
4. To analyse supplier performance and relationship dynamics using KPIs, contracts, and collaborative planning tools
5. To explore digital enablers and sustainability imperatives shaping modern procurement and supply-side operations

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of procurement, SC planning and scheduling
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of procurement, SC planning and scheduling in real-time problem-solving course
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of procurement, SC planning and scheduling course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of procurement, SC planning and scheduling in real-time problem-solving course

5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of procurement, SC planning and scheduling in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement • Visual presentation
Assessment Strategy	Parti Participants will be assessed on both conceptual understanding and applications of supply chain tools by way of: • Case study discussions & solving mini projects • Submission of assignments and individual presentation • Group presentation • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Procurement and Supplier lifecycle Centralized vs decentralized procurement models, strategic vs tactical sourcing, role of procurement in competitive advantage – Market analysis and supplier segmentation, category strategy development, spend analysis and opportunity identification, supplier lifecycle – Onboarding, qualification, and certification of suppliers, supplier performance reviews and continuous improvement, exit strategies and supplier consolidation.	8
Unit II	Supply Side Planning and MRP Role of master production scheduling (MPS) in supply planning, time fences and planning horizons, balancing demand, capacity, and inventory, Bom structure and explosion logic, inventory accuracy and data governance, integration with ERP systems, MRP logic and planning parameters, MRP vs MRP II vs DRP.	8
Unit III	Manufacturing Planning and Scheduling Setup and use of industry standard factory planning, handling of large-scale planning, data and analysis of planning scenarios, production scheduling of factory lines, resolution of infeasible planning scenarios based on prioritization with the help of tools.	8

Unit IV	Strategic Sourcing and Contract Lifecycle Management (CLM) Strategic sourcing framework including local cost management and value optimization, local vs global sourcing, contract lifecycle management (CLM) – Fundamentals, Technology negotiation, contract authoring and legal governance, performance monitoring and relationship management, side of sourcing - Workflow automation and smart contracts (Blockchain) for transparency and auditability, use of AI in contract authoring.	8
Unit V	Procure-to-pay Cycle, and Vendor Performance P2P cycle stages and automation, integration with ERP systems, invoice reconciliation and payment strategies, sustainable and ethical sourcing practices, procurement practices in Indian environment (Taxes and local practices), supplier innovation and collaborative development, relevant vendor performance KPIs and metrics.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAS004
Title Of the Course:	Demand Management & Customer Services
L: T: P: C:	3: 0: 2: 4

Overview

This course is intended to enable students to understand the standard industry practices used in demand management. The course covers another very critical aspect of demand management, i.e., demand forecasting techniques and the mathematics behind them. Traditional methods of forecasting are covered including static, adaptive, and auto-regressive techniques, various measures of error and how to choose the right forecasting method is also covered. Students will learn current trends in forecasting methods including the use of artificial intelligence techniques such as machine learning, and artificial neural network to augment statistical methods. The course will also provide an overview of demand planning and techniques like linear programming that is used for resource allocation problems.

Course Objectives

1. To learn the basics of demand management processes in large organizations
2. To develop mathematical skills of underpinnings forecasting methods
3. To understand the recent advances in forecasting
4. To learn hands on the use of demand forecasting software tools
5. To develop the demand planning process for a given organization based on its industry and market dynamics

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of demand management and customer services
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of demand management and customer services in real-time problem-solving course
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of demand management and customer services course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of demand management and customer services in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of demand management and customer services in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Parti Participants will be assessed on both conceptual understanding and applications of demand management tools by way of: • Case study discussions & solving mini projects • Submission of assignments and individual presentation • Group assignment and presentation • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Demand Forecasting in a Supply Chain using Time Series Understand the role of forecasting for both an enterprise and a supply chain, components of time series data, measurement of trend, seasonality and cycles, using moving averages and smoothing techniques for making a forecast, Holt 's and Winter 's smoothing model for forecasting, methods to measure forecast error, the role of IT in forecasting, risk management in forecasting.	8
Unit II	Multivariate Time Series Analysis & Forecasting Vector error correction, vector autoregressive (VAR) models, their advantages and disadvantages, estimation and forecasting with VAR, Johansen co-integration test on VAR, Granger causality test.	8
Unit III	Forecasting Using ML & Adv Regression Models Introduction to machine learning and forecasting using AI to supplement the mathematical tools, decision trees, regression trees and ensemble methods, use cases and applications of neural network for demand forecasting, RNNs, LSTMs for sequential data, hybrid models combining ARIMA+ML, anomaly detection and pattern recognition.	8
Unit IV	Enterprise Demand Planning & Master Production Scheduling (MPS) Implementing demand planning in an enterprise, enterprise response to variability in demand, and demand planning process, collaborating with sales, manufacturing and distribution functions, master production scheduling manual override of the MPS forecasts, rolling forecasts, revision and correction process, MPS recommendations and dispositions.	8

Unit V	Service Delivery & Management Foundations of service delivery, service design and architecture, service quality and performance management, capacity planning and demand management of services, digital platforms for service orchestration, contracts and SLA management, customer experience and relationship management.	8

Semester/Year:	IV Sem / II Year
Course Code:	26MBAS005
Title Of the Course:	Supply Chain Transformation and Analytics
L: T: P: C:	3: 0: 2: 4

Overview

Supply chain transformation and analytics is a forward-looking MBA course that explores how data-driven insights, digital technologies, and strategic redesign are reshaping supply chain ecosystems. It examines the interplay between operational excellence and innovation, focusing on how organizations leverage analytics, automation, and platform thinking to drive agility, resilience, and customer-centricity. Through case studies, modelling exercises, and systems thinking, students learn to diagnose inefficiencies, architect transformation roadmaps, and embed analytics into decision-making processes. The course prepares future leaders to navigate complexity, unlock latent value, and orchestrate supply chains as adaptive, intelligent networks.

Course Objectives

1. To understand the drivers and frameworks of supply chain transformation, including digitalization, sustainability, and strategic realignment
2. To apply analytics tools and techniques to model, visualize, and optimize supply chain performance
3. To evaluate emerging technologies such as AI, IoT, and blockchain in the context of supply chain innovation
4. To design transformation roadmaps and change management strategies for supply chain modernization
5. To integrate data governance and ethical considerations into analytics-driven supply chain decisions

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of SC transformation and analytics course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of SC transformation and analytics in real-time problem-solving course
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of SC transformation and analytics course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of SC transformation and analytics in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of SC transformation and analytics in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement • Visual presentation
Assessment Strategy	Parti Participants will be assessed on both conceptual understanding and applications of supply chain transformation by way of: • Mini projects • Submission of assignments • Group presentation • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Application of I4.0 tools in Supply Chain Operations Foundations of industry 4.0 in SCM, smart logistics and autonomous systems, blockchain and secure contracts, cyber-physical systems and IoT/IIoT integration, circular supply chains.	8
Unit II	AI, M AI, ML and IoT/IIoT in SC Transformation Foundations of digital supply chain transformation, scenario planning and adaptive forecasting using AI & ML, IOT for real-time visibility and asset tracking (Sensor's network, RFID, smart tags), cold chain and perishables tracking.	8
Unit III	Digital transformation of Supply Chain Use cases of supply chain digital transformation, implementation frameworks and tools, risk mitigation challenges and techniques, cybersecurity, interoperability, data governance, cloud based collaborative platforms.	8
Unit IV	SC Performance and Analytics Understanding and designing supply chain performance parameters, direct connection and dependency of SC on revenue, profitability and customer satisfaction on those parameters and other KRAs, overview and application of predictive and prescriptive analytics in SC.	8

Unit V	Omni channel retail & Platform Business models Foundations of omnichannel retailing, customer journey mapping and experience design, technology enablers and integration (CRM, mobile apps, commerce platforms), platform business models in B2C environment - Order fulfilment, logistics, and returns management, role of pricing, merchandising, and promotions, strategic challenges to retail and platform models and future trends.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAE001
Title of the Course:	Startup Thinking and Innovation Strategy
L: T: P: C:	3: 0: 2: 4

Overview

This course equips students with an entrepreneurial mindset to recognize opportunities, generate business ideas, and build innovative ventures. It emphasizes creativity, design thinking, business model development, funding strategies, and growth management. Students will learn how to pitch, scale, and sustain ventures in the digital economy.

Course Objectives

1. To understand the entrepreneurial mindset and its role in venture creation
2. To apply creativity, design thinking, and lean methods in new venture development
3. Develop business plans using tools such as the business model canvas
4. Design financial and funding strategies, including pitch decks and storytelling
5. To manage growth, innovation, and exit strategies in entrepreneurial ventures

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of start up thinking and innovation strategy course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of start up thinking and innovation strategy in real-time problem-solving course.
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of start up thinking and innovation strategy course.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of start up thinking and innovation strategy in real-time problem-solving course.
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of start up thinking and innovation strategy in real-time problem-solving course.

Approach to Learning	• Interactive lectures & readings • Case study analysis (global & Indian startups) • Class simulations & role-plays (e.g., Shark Tank) • Group projects and prototyping exercises • Peer-to-peer learning and reflective assignments • Book review
Assessment Strategy	• Assignments • Case & startup analysis • Pitch presentations and projects • Mid-semester and end-semester exams • Balanced formative and summative evaluation

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	The Entrepreneurial Perspective Entrepreneurial mindset, nature & importance of entrepreneurs, digital entrepreneurship & platform models, sustainable & ESG-oriented ventures, global tech trends (AI, blockchain, IoT).	8
Unit II	Creating & Starting the Venture Creativity & idea generation, identifying domestic & global opportunities, design thinking & lean startup, IP & data protection, co-creation platforms & tools.	8
Unit III	From Opportunity to Business Plan Business model canvas & value proposition canvas, digital marketing & growth hacking, data-driven decision making, omni-channel & AI-powered marketing.	8
Unit IV	Business Plan to Funding KPIs & metrics, scaling strategies, co-creation & participatory models, digital tools (AI, big data, storytelling), global best practices, public policy & government partnerships.	8
Unit V	Growth & Exit Strategies Scaling through technology & automation, strategic alliances & ecosystems, innovation management & product pivots, growth implications & exit planning.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAE002
Title of the Course:	Business Plan Development & Pitch Readiness
L: T: P: C:	3: 0: 2: 4

Overview

This course equips students to turn ideas into viable ventures through a step-by-step process of ideation, validation, business modelling, financial planning, and pitching. Covering five units, it guides them in shaping business ideas, building core plan components, developing financial and operational strategies, and creating compelling pitch decks. The course concludes with a pitch-day simulation, giving students practical experience in presenting to stakeholders and benchmarking against global best practices.

Course Objectives

1. To develop skills in idea generation, validation, and business model design
2. To understand and build the core components of a comprehensive business plan
3. To learn financial planning and operational strategy for scalability and sustainability
4. To enhance the ability to craft persuasive pitch decks and apply storytelling techniques
5. To provide a hands-on pitch-day experience, preparing students for real-world entrepreneurial challenges

Course Outcomes

After completion of this course students will be able to:

1. Exhibit a fair understanding of the concepts, theories, models and principles of business plan development & pitch readiness, including ideation, validation, and business model design for new ventures.
2. Demonstrate the ability of applying the concepts, theories, models and principles of business plan development & pitch readiness to create and structure the core components of a business plan covering market analysis, competition, marketing, and organization design.
3. Demonstrate the ability of analysing financial and operational requirements using skills acquired from the concepts, theories, models and principles of business plan development & pitch readiness, focusing on projections, cost structures, and scalability.
4. Exhibit the ability of designing and redesigning pitch decks and storytelling strategies by using the acquired skills from the concepts, theories, models and principles of business plan development & pitch readiness in real-time entrepreneurial communication.
5. Exhibit the ability of developing or redesigning investor-ready business models and presentations using the acquired skills from the concepts, theories, models and principles of business plan development & pitch readiness in a simulated pitch

environment.

Approach to Learning	• Workshops for business models, financials, and pitch decks • Case studies and benchmarking against global best practices • Simulations and role-plays to build pitching confidence • Pitch-day exercise to integrate and apply learning
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of Finance practices by way of: • Class participation & attendance engagement in lectures and workshops • Assignments & mini-projects • Mid-semester evaluation • Pitch deck submission that is graded on clarity, structure, and storytelling • Final pitch-day presentation – simulated investor pitch with Q&A, weighted as the capstone evaluation.

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Ideation, Validation & Business Model Generating and refining business ideas, validating concepts through market feedback, designing business models, assessing feasibility, and aligning vision with customer needs.	8
Unit II	Core Components of a Business Plan Defining company overview, conducting industry and competitor analysis, identifying target markets, formulating marketing and sales strategies, structuring management and organisation, and addressing social responsibility.	8
Unit III	Financial Planning & Operations Strategy Developing financial projections, planning funding and investment needs, designing cost structures, outlining operational processes, building scalability and sustainability strategies.	8
Unit IV	Pitch Deck & Storytelling Structuring a persuasive pitch deck, applying storytelling techniques, tailoring messages to investors and stakeholders, using design and visuals effectively, and practising delivery for clarity and impact.	8

Unit V	Plan to Action: Pitch Day & Review Simulating real-world pitch day, presenting business plans to an audience, defending strategies through Q&A, receiving feedback from peers and evaluators, benchmarking against global best practices.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAE003
Title Of the Course:	Entrepreneurial Finance
L: T: P: C:	3: 0: 2: 4

Overview

This course equips students with a comprehensive understanding of entrepreneurial finance, emphasizing the connection between business models, revenue streams, and cost structures. It traces the funding lifecycle from bootstrapping to IPO, while also introducing students to financial statement preparation, burn rate management, and cash flow forecasting. The syllabus covers diverse funding sources such as equity, debt, convertible instruments, crowdfunding, and blended finance, alongside securities law considerations and the role of strategic partnerships. Students will also learn startup valuation techniques, cap table management, and investor negotiation strategies. Finally, the course prepares students to navigate growth stages, exit opportunities, and turnaround scenarios, with practical application through valuation labs, crowdfunding pitches, financial forecasting, and investor board simulations.

Course Objectives

1. To develop a strong foundation in entrepreneurial finance concepts and practices
2. To understand funding lifecycles and diverse capital sources including equity, debt, and alternative instruments
3. To gain practical skills in financial statement preparation, cash flow forecasting, and cost optimization
4. To learn valuation methods, cap table management, and negotiation tactics with investors
5. To prepare students for long-term growth planning, exit strategies, and managing distressed ventures

Course Outcomes

After completion of this course students will be able to:

1. Exhibit a fair understanding of concepts, theories, models and principles of entrepreneurial finance: funding, valuation & growth, including business model finance linkages, funding lifecycles, and investor expectations.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of entrepreneurial finance: funding, valuation & growth to prepare and analyse startup financial statements, manage burn rate, and forecast cash flows for operational success in real-time problem-solving course.
3. Demonstrate the ability of analysing the real-time problem-solving, funding sources and capital structures using the skills acquired from the concepts, theories, models and principles of entrepreneurial finance: funding, valuation & growth, including equity, debt, convertible and blended finance.
4. Exhibit the ability of designing and redesigning existing and new valuation models and negotiation frameworks by using the acquired skills from the concepts, theories,

models and principles of entrepreneurial finance: funding, valuation & growth in real-time investor interaction contexts.
5. Exhibit the ability of developing or redesigning existing and new models by growth, exit, and turnaround strategies using the acquired skills from the concepts, theories, models and principles of entrepreneurial finance: funding, valuation & growth to ensure long-term investor confidence and venture sustainability in real-time problem-solving course.

Approach to Learning	• Interactive Lectures • Hands-on Simulations • Case-Based Learning • Collaborative Projects • Blended Resources
Assessment Strategy	Participants will be assessed on both conceptual understanding and practical business aspects by way of: • Mini projects • Submission of assignments • Group assignments • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Entrepreneurial Finance Foundations Role of finance in entrepreneurial decision-making, linking business models to revenue and cost structures, understanding investor mindset: Risk-return trade-offs, funding lifecycle: Bootstrapping to IPO, activity: Map funding options to the business plan.	8
Unit II	Organizing & Operating for Financial Success Building financial statements for startups, analysing operating & financial performance, managing burn rate and cash runway, startup cost optimization strategies, activity: Create 12-month cash flow forecast for a startup case.	8
Unit III	Funding Sources & Structures Types & costs of capital: Equity, debt, convertible instruments, crowdfunding, grants, and blended finance for social ventures, green finance, securities law basics for fundraising, strategic partnerships & corporate venture capital, activity: Crowdfunding campaign pitch video (team-based).	8
Unit IV	Valuation & Investor Negotiations Startup valuation techniques: VC method, scorecard, comparables, cap table management & dilution scenarios, understanding term sheets & investor rights, negotiation tactics for founders, activity: Valuation lab, calculate pre-money & post-money valuations for a case.	8

Unit V	Growth, Exit & Turnaround Strategies Scaling capital needs: Series A, B, and beyond, exit strategies: Acquisition, IPO, management buyouts, financing turnarounds and distressed ventures, sustaining investor relations post-funding, activity: Simulate an investor board meeting for a scaling startup.	8

Text Books

1. Leach, J. Chris & Melicher, W. Ronald, 2018. Entrepreneurial Finance, 7th ed., New Delhi: Cengage Learning.
2. Metrick, Andrew & Yasuda, Ayako, 2011. Venture Capital and the Finance of Innovation, 3rd ed., New Jersey: Wiley.

Semester/Year:	III Sem / II Year
Course Code:	26MBAE004
Title of the Course:	New Venture Creation
L: T: P: C:	3: 0: 2: 4

Overview

This course equips students to navigate the journey from idea to launch of a new venture. It emphasizes opportunity recognition, problem-solution validation, MVP development, go-to-market strategies, legal and funding readiness, and scaling for growth. By the end, students will be able to design, test, and execute sustainable business models with confidence.

Course Objectives

1. To understand the process of turning ideas into viable ventures
2. To validate opportunities through customer research and feedback
3. To develop and test minimum viable products (MVPs) for product market fit
4. To explore legal, funding, and team-building essentials for new ventures
5. To build strategies for launch, branding, and sustainable growth

Course Outcomes

After completion of this course students will be able to:

1. Exhibit a fair understanding of concepts, theories, models and principles of new venture creation: from idea to launch, including opportunity recognition, problem-solution validation, and business model development.
2. Demonstrate the ability to apply the skill of concepts, theories, models and principles of new venture creation: from idea to launch to develop and test minimum viable products (MVPs) through prototyping, iteration, and feedback in a real-time problem-solving course.
3. Demonstrate the ability to analyse real-time problems, such as go-to-market and branding strategies, using skills acquired from concepts, theories, models and principles of new venture creation: from idea to launch course, including pricing, positioning, and storytelling.
4. Exhibit the ability of designing and redesigning existing and new models of legal and funding frameworks by using the acquired skills from the concepts, theories, models and principles of new venture creation: from idea to launch for new ventures in real-time problem-solving course.
5. Exhibit the ability to develop or redesign existing and new scalable and sustainable business models by using the acquired skills from the concepts, theories, models and principles of new venture creation: from idea to launch to plan, launch, and grow ventures in a real-time problem-solving course.

Approach to Learning	• Interactive lectures on venture creation from idea to launch • Hands-on workshops for ideation, MVP building, and prototyping • Field research and customer validation exercises • Case studies on branding, funding, and scaling startups • Team projects to simulate real-world venture execution
Assessment Strategy	Participants will be assessed on both conceptual understanding and business practices by way of: • Mini projects • Submission of assignments • Group assignments • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Ideation & Validation Opportunity recognition and selection, problem-solution fit and customer personas, validation through field research (minimum 15 interviews/surveys), developing and testing a business model/using lean canvas for rapid iteration.	8
Unit II	MVP Development & Testing Prototyping and validating a solution/defining MVP scope (physical/digital products & services), prototyping tools (Figma, Canvas, low-fidelity models), feedback loops and pivot/iterate decisions, integrating sustainability and responsible innovation.	8
Unit III	Go-to-Market & Branding Crafting the GTM plan, digital and offline marketing channels, pricing models for market entry, creating brand identity (logo, messaging, storytelling).	8
Unit IV	Legal & Funding Readiness Incorporation structures & compliance, IP protection (Patents, trademarks, copyrights), funding sources: Bootstrapping, angel investors, grants, crowdfunding, building the founding team, calculating startup capital requirements/checklist.	8
Unit V	Business Design/Launch Execution & Scaling Preparing a business plan, designing an entrepreneurial organisation, planning startup operations/creating a launch roadmap and timeline, operational readiness & resource allocation, choosing the legal form of organisation/IP etc., funding startup and growth, planning for growth and change.	8

CO- PO Mapping

	PO1	PO2	PO3	PO4	PO5	PSO1	PSO2	PSO3	PSO4

Semester/Year:	III Sem / II Year
Course Code:	26MBAB001
Title Of the Course:	Data Management Systems
L: T: P: C:	3: 0: 2: 4

Overview

Today 's organizations recognize that managing data is central to their success. They recognize data has value and they want to leverage that value. Data is the fundamental raw material for any business which enable sensing the internal and external parameters that could have bearing on business performance. Those parameters provide the basis for action when analysed for insights. The insights are relevant to understand the current state of the business as well as the likely future state. The derived insights provide the basis for all business decisions which precede action. Having the required insights in time, enable the organisations to be responsive and adapt. Harnessing required data while ensuring its dependability organised storage to enable access on demand, data security and access control is the subject of data management systems. As all aspects of business have dependency on data, every business executive has a definite role in contributing to the success of data management systems. Business organizations are adapting to become digital enterprises of the future. Understanding data management systems facilitates active participation in transformation process to digital enterprise.

Course Objectives

1. To enable students to appreciate data requirements for business
2. To enable students to understand data and data management systems in relation to any business domain by a systematic process based on goal setting and performance management as the factors that lead to success
3. To enable understanding of data sources, data capture & storage
4. To enable students to understand data models, master data, MDM, schema, relational and No-SQL databases, data warehouse and data lake
5. To enable understanding of data organisation from speed of response, and information security

Course Outcomes

After completion of this course students will be able to:
1. Exhibit the fair understanding of concepts, theories, models and principles of business data management course, including data requirements, business entities, their relationships, and the business value of data.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of business data management in real-time problem solving by identifying and harnessing various data sources such as ERP systems, big data, databases, data warehouses, NoSQL databases, ETL systems, IoT, and data streams.
3. Demonstrate the ability of analysing real-time problems using the skills acquired from concepts, theories, models and principles of business data management by evaluating master data, organizational data dictionaries, and one-truth databases.

4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of business data management for decision-making related to data centres, including in-house, co-located, and cloud computing (private, public, hybrid).
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of business data management to formulate data security requirements and policies.

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of data management systems by way of: • Mini projects • Submission of assignments • Group assignments • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Data Fundamentals Data, types of data, information, derived insights from analysis, meta data, data structures, decision making in management - Strategic, tactical and operational decisions, decision support with management information systems, data sources & defining data need, internal data, transaction data, structured and unstructured data, external data, PESTEL, competition, Porters 5 forces, physical records, flat files, spreadsheet, databases, social media, data models, retail marketing as a case study to exemplify definition of data requirements, information security, data life cycle management, types of data models: Conceptual, logical, physical, case study on data governance in retail sector, introduction to data profiling techniques, key performance indicators (KPIs) and their data sources, real-world examples of MIS in decision-making, security risks in data handling and prevention measures.	8

Unit II	Database Systems Data base systems, relational databases (RDBMS) in particular, entity relations and ER diagram, database schema, data base organisation, primary key, and foreign key, stored procedures and referential integrity, data base replication, introduction to SQL for query and reporting with examples, popular RDBMS with relative merits, normalization: 1NF, 2NF, 3NF, BCNF, indexing for query optimization, Joins: Inner, outer, left, right, stored function vs stored procedure.	8
Unit III	Using SQL for Extracting Information from RDBMS Using SQL for extracting information from RDBMS, introduction to entity and entity relations, attributes, Entity – Primary and foreign keys, SQL commands, using MS-SQL express to work on creating, modifying, querying, reporting, aggregate functions: SUM, AVG, COUNT, GROUP BY and HAVING clauses, pattern matching with LIKE, SQL date and time functions.	8
Unit IV	Data Warehouse, Data Lakes and their Applications Data warehouse, data lakes and their applications, data warehouse and data mart, data warehouse schema, star, snowflake, Star - Operational data store, ETL, OLAP, limitations of data warehouse, data lake, concepts, business purpose, well known data warehouse and data lake products, data virtualization concepts, data ingestion tools (e.g., Apache NiFi, Talend), slowly changing dimensions (SCD), data governance in warehousing, integration of cloud storage with data lakes.	8
Unit V	Big Data, Unstructured Databases (NoSQL), and Data Mining Big data, unstructured databases aka NoSQL databases, data mining, big data, concepts and uses, introduction and the need for unstructured data bases, organization of NoSQL databases, top rated NoSQL databases, extracting information from NoSQL databases, introduction to data mining, business purpose served, data structures for data mining, CAP theorem in NoSQL, types of NoSQL databases: Key-value, document, column, graph, big data architecture overview, data preprocessing for data mining, ethical considerations in big data analytics.	8

CO- PO Mapping

CO4	3	2	2	2	2	2	2	2	2
CO5	3	2	2	2	2	2	2	3	2

Action Based Component

1. Defining data requirements for finance, marketing & sales, HR, SCM and CRM
2. Use SQL query to extract information from MS-SQL express. Students will be installing MS-SQL express, load data and use SQL to query and extract data
3. Design a mini data warehouse
4. Work on NoSQL using Mongo-SQL or any other NoSQL Databases depending on free license availability
5. Mini workshop on information security needs, access control

Semester/Year:	III Sem / II Year
Course Code:	26MBAB002
Title of the Course:	Applied Analytics
L: T: P: C:	3: 0: 2: 4

Overview

The Applied Analytics course is designed not only to explain what each model does or functions but also explores how businesses use them, whether it is to gather insights, solve problems, or predict outcomes.

Course Objectives

1. To apply quantitative modelling and data analysis techniques to the solution of real-world business problems, communicate findings, and effectively present results
2. To demonstrate knowledge of statistical data analysis techniques utilized in business decision making
3. To apply principles of data science to the analysis of business problems
4. To use data mining software to solve real-world problems
5. To employ cutting edge tools and technologies to analyse (Big) data

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of business analytics course, including how to collect and prepare data for analysis
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of business analytics in real-time problem solving by using analytical tools to gather meaningful business insights
3. Demonstrate the ability of analyzing real-time problems using the skills acquired from concepts, theories, models and principles of business analytics through data-driven decision-making to support informed business decisions
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of business analytics to examine whether analytical results confirm business hypotheses
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of business analytics, including evaluating ways to apply machine learning techniques to solve business problems

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business applications of applied analytics by way of: • Mini projects • Submission of assignments • Group assignments • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Spreadsheet Modelling Spreadsheet modelling, concepts and best practices, relative & absolute addresses, range names, auditing formulas, SUM, AVERAGE, PRODUCT, COUNT, COUNTA, COUNTBLANK, COUNTIF, SUMIF, AVERAGEIF, COUNTIFS, SUMIFS, AVERAGEIFS, SUMPRODUCT, IF, VLOOKUP, RAND, RANDBETWEEN, pivot tables, data tables, goal seek, INDEX and MATCH functions, using TEXT functions (LEFT, RIGHT, MID, TEXT), date and time functions.	8
Unit II	Marketing Marketing, predicting customer churn, customer segmentation, sales forecasting, customer lifetime value analysis, A/B testing for marketing campaigns.	8
Unit III	Human Resource Resource, predictive HR analytics in recruitment and selection, predictive HR analytics in turnover and separation, predictive HR analytics in learning and development, attrition risk scoring models, absenteeism prediction using historical data.	8
Unit IV	Finance Finance, predicting stock market returns, detecting fraudulent transactions, predicting bank loan defaults, loan approval scoring systems, Value at Risk (VaR) estimation.	8
Unit V	Supply Chain Supply chain, Monte Carlo simulation modelling (Harry 's Auto Tire), transportation problem (Executive Furniture Corporation), waiting line problem (Three Rivers Shipping Company), inventory optimization using ABC analysis, safety stock calculation and reorder point models.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAB003
Title Of the Course:	Data Visualization for Decision Making
L: T: P: C:	3: 0: 2: 4

Overview

In this course, students will learn the fundamentals of data visualization and how to transform data into powerful visualizations that lead to actionable insights. Tableau, a leading business intelligence tool, will be used for hands-on learning. Students will create and share interactive dashboards that illustrate trends, variations, and data distributions through graphs and charts. Tableau can connect to files, relational databases, and big data sources to acquire and process information. The software also supports data blending and real-time collaboration, making it a unique and versatile tool. It is widely used by businesses, academic researchers, and government organizations for visual data analysis and is recognized as a leader in business intelligence and analytics by the Gartner Magic Quadrant. **Prerequisite:** Tableau Public software.

Course Objectives

1. To enable students with tools and techniques to communicate analytical insights
2. To empower students with understanding of appropriate visualization for the task inhand
3. To empower students with data blending options across data sources and bring them to life using visualizations
4. To enable them to create impactful dashboards for the problem in hand
5. To enable students to do storytelling for non-technical audience using data visualization

Course Outcomes

After completion of this course students will be able to:
1. Exhibit the fair understanding of concepts of data visualization and Tableau course, including interpreting analytical insights through appropriate visualizations.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of data visualization and Tableau in real-time problem solving by choosing appropriate visualizations for specific tasks.
3. Demonstrate the ability of analyzing real-time problems using the skills acquired from concepts, theories, models and principles of data visualization and Tableau by examining data sources and bringing them to life through visualizations.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of data visualization and Tableau for selecting impactful dashboards for given problems.

5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of data visualization and Tableau, including developing analytical insights using Tableau story.

Approach to Learning	● Lectures ● Readings ● Active student participation and classroom exercises ● Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of data visualization by way of: ● Mini projects ● Submission of assignments ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Data Visualization Principles Data visualization principles, univariate categorical data, univariate numerical data, 1 categorical data & 1 numerical data, bivariate categorical data, bivariate numerical data, data-ink ratio and chart simplicity, Gestalt principles in data visualization, common pitfalls in axis scaling.	8
Unit II	Introduction to Tableau Introduction to Tableau, installing Tableau public, getting started with Tableau, saving Tableau public, navigation design flow, file types, data types, show me, terminology, dimensions vs measures, changing data types, filtering basics in tableau.	8
Unit III	Data Sources in Tableau Data sources, fields operation: Adding, combining, searching, reordering, editing metadata, data joining, data blending, connecting to google sheets, connecting to PDFs, pivoting data in Tableau, using data interpreter, extracting vs live data sources.	8
Unit IV	Tableau Features Tableau features, drill down, swapping dimensions, calculations, sort & filters, Tableau parameter, action URL, actions filter, quick table calculations, creating hierarchies, dynamic sorting.	8
Unit V	Storytelling with Tableau Storytelling with Tableau, Tableau charts: Bar, line, pie, crosstab, scatterplot, bubble, boxplot, histogram, tree map, dashboards, story, formatting, forecasting, trend lines, storytelling guidelines, highlight tables, dual-axis charts, KPI dashboards, interactive story points, exporting and publishing stories.	8

CO- PO Mapping

	PO1	PO2	PO3	PO4	PO5	PSO1	PSO2	PSO3	PSO4
CO1	3	-	-	3	-	2	2	2	2
CO2	3	-	-	-	2	2	3	2	2

SEMESTER/YEAR:	III Sem / II Year
COURSE CODE:	26MBAB004
TITLE OF THE COURSE:	Predictive Analytics Using R
L: T: P: C:	3: 0: 2: 4

Overview

In this course, students will learn the basics of machine learning using R programming. They will gain an understanding of where machine learning fits within the analytics landscape, the different types of machine learning algorithms, and the overall data science process from data collection to model evaluation. The course is hands-on, using R and R

Studio, with mini-projects implemented for each type of algorithm to reinforce practical learning.

Course Objectives

1. To understand and apply fundamental R data structures for data analysis
2. To explore the principles of exploratory data analysis and evaluate its significance in deriving insights from data
3. To design and implement supervised machine learning algorithms using R for business applications
4. To design and implement unsupervised machine learning algorithms using R for business application
5. To analyze and model time series data using R for forecasting and decision-making

Course Outcomes

After completion of this course students will be able to:
1. Exhibit the fair understanding of concepts, theories, models and principles of machine learning course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of machine learning in real-time problem-solving by performing EDA and machine learning processes using R.
3. Demonstrate the ability of analyzing real-time problems using the skills acquired from concepts, theories, models and principles of machine learning by evaluating model performance with appropriate measures.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of machine learning for real-time problem-solving and model appraisal.
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of machine learning, including choosing appropriate ML algorithms for different situations.

Approach to Learning	● Lectures ● Readings ● Active student participation and classroom exercises ● Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of R by way of: ● Mini projects ● Submission of assignments ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to Machine Learning (ML) Introduction to ML, types of analytics: Descriptive, diagnostic, predictive, prescriptive, statistics basics, types of data: Structured, semi structured, unstructured, structured data using RDBMS: Table, columns, rows, Introduction to ML, ML use cases, algorithm types: Supervised, unsupervised, reinforced, regression vs. classification, managing and understanding data: Vectors, factors, lists, data frames, matrices and arrays, importing and saving data from CSV files, exploring and understanding data: Exploring the structure of data, exploring numeric variables, exploring categorical variables, exploring relationships between variables, working with missing data in R, filtering and selecting data, summarizing data for business insights, exporting cleaned data to CSV or excel for business reporting.	8
Unit II	Supervised Machine Learning Supervised machine learning, KNN algorithm: How does it work?, example - Diagnosing breast cancer with KNN, Decision trees, Gini Index, chi square to choose decision node, parameters to control overfitting, example – Identifying risky bank loans, Neural networks: How do they work?, example - Modelling the strength of concrete with ANNs, multiple linear regressions, example – Predicting medical expenses using linear regression, logistic regression: Binary classification for business decisions, random forest algorithm: Concept and advantages over decision trees.	8
Unit III	Unsupervised Machine Learning Unsupervised machine learning, market basket using Apriori algorithm, support, confidence, lift, example – Identifying frequently purchased groceries with association rules, k means algorithm, example - Finding teen market segments using k-means clustering, hierarchical clustering - Visual method using dendrograms, business use: Grouping stores, regions, products.	8

Unit IV	Evaluating Model Performance Evaluating model performance, measuring performance for classification, working with classification prediction data, using confusion matrix to measure performance, measures other than accuracy: Kappa, sensitivity, specificity, precision and recall, F ratio, ROC, estimating future performance: Holdout, cross validation, bootstrap sampling, business interpretation of evaluation metrics, cost-based evaluation of classification errors.	8
Unit V	Time Series Introduction Time series introduction, data types and formats, components and objectives, reading, plotting and decomposing time series data in R, forecasts using exponential smoothing in R, ARIMA models in R, handling missing or irregular time series data, model evaluation for time series forecasting.	8

CO- PO Mapping

Semester/Year:	IV Sem/ II Year
Course Code:	26MBAB005
Title Of the Course:	EDA Using Python
L: T: P: C:	3: 0: 2: 4

Overview

The programming requirements of data science demand a versatile and flexible language that is simple to code yet capable of handling highly complex mathematical processing. Python is particularly well-suited for these requirements, as it has established itself as a language for both general-purpose and scientific computing. Moreover, it is continuously upgraded with new additions to its extensive library ecosystem, catering to diverse programming needs. This is a hands-on practical course. Lab computers should preferably have Anaconda (Python IDE) installed, along with Jupyter Notebook, and a working internet connection. Students are not expected to have prior programming experience, but they must be willing to learn and practice beyond classroom sessions.

Course Objectives

1. To enable students, understand the features of Python language and different IDEs like Jupyter notebook and Spyder
2. To enable students, understand the features and functions of Python packages: NumPy, Pandas
3. To enable students to apply and leverage on Pandas and NumPy functionalities in performing data handling, data manipulation and data management tasks
4. To enable students to apply and leverage on Matplotlib library to perform data visualizations and descriptive data analysis
5. To enable students to understand and apply the machine learning models using Python language

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of Python programming course, including its features and applications.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of Python programming in real-time problem solving by using NumPy for data handling and manipulation, and understanding the capabilities of the Pandas library.
3. Demonstrate the ability of analyzing real-time problems using the skills acquired from concepts, theories, models and principles of Python programming by examining NumPy and Pandas libraries for advanced data management tasks along with databases.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of Python programming for descriptive statistics and data visualization tasks.

5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of Python programming, including adapting and applying different machine learning algorithms.

Approach to Learning	• Lectures • Active student participation and classroom exercises • Mini project • Case analysis collaboratively with student involvement • Visual presentation
Assessment Strategy	Participants will be assessed on both conceptual understanding and business applications of Python programming language by way of: • Case study discussions & solving mini projects • Submission of assignments and individual presentation • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to the Data Analysis and Python World Introduction to the data analysis and Python world, data analysis process, quantitative and qualitative data analysis, Python introduction, Python interpreter, Python distributions, Anaconda environment, Jupyter notebook, aide for Python, built-in Python libraries, built-in functions, data types, libraries and modules, programs on applications of data types methods and built-in functions, introduction to google Collab as an aide, best practices for clean business code in Python, basics of error handling.	8
Unit II	Introduction to NumPy and Pandas Libraries, NumPy: Creation of an array, operators, functions, indexing, slicing, and iterating, shape manipulation, array manipulation, structured arrays, reading and writing array data on files, Pandas: Introduction to Pandas data structures, reindexing, dropping, arithmetic and data alignment, operations between data structures, function application and mapping, sorting and ranking, “not a number” data, hierarchical indexing and levelling, creating custom functions, data filtering and conditional selection, exporting data to excel and CSV formats.	8

Unit III	Data Handling with Pandas Data handling with Pandas, reading data in CSV or text files, reading and writing HTML files, reading data from XML, JSON data, Pickle—Python object serialization, reading and writing data on Microsoft excel files, interacting with databases, data preparation, concatenating, data transformation, discretization and binning, permutation, string manipulation, data aggregation, group iteration, advanced data aggregation, data profiling and summary reports, detecting and handling duplicates, data validation techniques in Pandas.	8
Unit IV	Descriptive Statistics and Data Visualization Descriptive statistics and data visualization, descriptive statistics: Distribution functions, measures of central tendencies, measures of variations, measures of shape, visualizations: Visualization with Pandas library, visualization with Matplotlib library, choosing the right chart for the right data, outlier detection through visualization.	8
Unit V	Model Development and Evaluation Model development and evaluation, hypothesis testing, P-hacking, correlation and regression, linear vs. non-linear models in simple terms, constructing and implementing linear models, descriptive, supervised machine learning, unsupervised machine learning, reinforcement learning, Statistics: Unified machine learning workflow, exploratory data analysis on a sample dataset, data splitting: Train/test vs. cross-validation, model evaluation metrics (Accuracy, precision, recall, F1-score).	8

CO- PO Mapping

	PO1	PO2	PO3	PO4	PO5	PSO1	PSO2	PSO3	PSO4
CO1	3	2	2	2	2	2	2	2	2

CO3	3	2	2	2	2	2	2	2	3
CO4	3	2	3	2	2	2	2	2	2
CO5	3	2	2	2	2	2	2	3	2

Action Based Component

1. Mini projects on data collection, data cleaning, data transformation, and data visualization, followed by exploratory data analysis and interpretation.
2. Group-based presentations and reports on exploratory data analysis outcomes, emphasizing business interpretation and managerial insights.
3. Data preprocessing and validation activities, including handling missing values, outliers, and duplicate records in real datasets.

Semester/Year:	III Sem / II Year
Course Code:	26MBAR001
Title Of the Course:	AI Fundamentals
L: T: P: C:	3: 0: 2: 4

Overview

In this course, students will learn the basics of AI and gain a perspective on what AI is along with an introduction to the AI landscape. They will explore the different types of AI and key concepts in the field, as well as generative AI, agentic AI, and other emerging AI technologies. The course will incorporate hands-on experience with generative AI tools, and students will implement mini projects to deepen their understanding.

Course Objectives

1. To provide foundational understanding of artificial intelligence, its types, and its role in effective decision-making
2. To introduce Generative AI concepts, tools, and techniques, with emphasis on prompt engineering and real-world applications
3. To familiarize students with Agentic AI, multi-agent systems, and industry applications of autonomous agents
4. To explore disruptive applications of AI, including Edge AI, IoT, and emerging technologies such as Quantum AI
5. To instil awareness of responsible AI practices, addressing ethics, privacy, security, and governance strategies

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of artificial intelligence course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of Generative AI in real-time problem-solving course.
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of agentic AI course.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of emerging AI technologies such as edge AI, IoT integration, and Quantum AI in real-time problem-solving course.
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of responsible AI in real-time problem-solving course.

Approach to Learning	• Lectures • Readings • Hands on exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding & business application by way of: • Mini projects • Group assignments • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	AI Introduction AI, key concepts in AI, types of AI, evolution of data science and rise of artificial intelligence, basis for management decisions, managing risk in decision making, AI & effective decision making.	8
Unit II	Generative AI Generative AI introduction, the bright & dark side of Generative AI, applications of Generative AI, a brief history of Generative AI, NLP & Gen AI, foundational models, large language models, small language models, RAG applications, prompt engineering, prompt architecture, Gen AI tools & applications.	8
Unit III	Agentic AI AI agents, traditional AI vs agentic AI, key concepts in agentic AI, agentic workflow, multi agent system (MAS), MCP, swarm intelligence and agent-based modelling, industry applications.	8
Unit IV	Disruptive Applications of AI and Emerging Technologies Edge AI - An overview, edge AI in industrial applications, IoT architecture with AI, quantum computing fundamentals, quantum AI.	8
Unit V	Responsible AI Introduction to responsible AI, AI strategy, AI TRISM, ethical considerations, privacy and security concerns, responsible AI practices.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAR002
Title Of the Course:	Deep Learning & Advanced Models
L: T: P: C:	3: 0: 2: 4

Overview

In this course students will be exposed to the details of neural networks as well as deep learning architectures. This course gives an algorithmic perspective and implementation details of ANN, CNN, RNN, LSTM, autoencoders, restricted Boltzmann machines, and deep belief networks.

Course will be hands on using python packages and mini projects will be implemented.

Course Objectives

1. To intuitively understand the business context to deep learning
2. To learn deep learning approaches that are inspired by the human brain
3. To learn convolution neural networks to solve typical computer vision problems
4. To design shallow and deep networks using activation functions
5. To intuitively understand advanced models RNN, LSTM, autoencoders, restricted Boltzmann machines, and deep belief networks

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of deep learning course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of deep learning in real-time problem-solving course
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of artificial neural network course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of convolutional neural network in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of recurring neural network and other deep learning models in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Hands on exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding & business application by way of: • Mini projects • Group assignments • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to Deep Learning Deep learning models, understanding deep learning intuitively, understanding deep learning evolution, single layer perceptron model (SLP), multilayer perceptron model (MLP), convolutional neural networks (CNNs), recurrent neural networks (RNNs), restricted Boltzmann machines (RBMs), deep belief networks (DBNs), experimental design, feature selection, applied machine learning and deep learning.	8
Unit II	Artificial Neural Network (ANN) SLP model, training the perceptron model, Windrow-Hoff algorithm, limitations of SLP, MLP model, back propagation algorithm for MLP, hidden layers, understanding SLP & MLP intuitively, optimizing ANN performance, gradient descent, understanding cost functions, building a ANN model.	8
Unit III	Convolutional Neural Network (CNN) Structure and property of CNNs, understanding CNN intuitively, components of CNN architectures, convolutional layer, pooling layer, rectified linear units (ReLU) layer, fully connected (FC) layer, loss layer, optimizing CNN performance, building a CNN model.	8
Unit IV	Recurrent Neural Network (RNN) Fully recurrent networks (understanding RNN intuitively), training RNNs with back-propagation through time (BPPT), Elman neural networks, neural history compressor, long short-term memory (LSTM), traditional LSTM, training LSTMs, structural damping within RNNs, tuning parameter update algorithm, practical example of RNN: Pattern detection, building a LSTM neural network, RNN model evaluation.	8
Unit V	Autoencoders, Restricted Boltzmann Machines, and Deep Belief Networks Understanding Models Understanding models intuitively, autoencoders, linear autoencoders vs. restricted Boltzmann machines, contrastive divergence (CD) learning, momentum within RBMs, weight decay, sparsity, deep belief networks (DBNs), fast learning algorithm (Hinton and Osindero 2006), building a Boltzmann model, Boltzmann model evaluation.	8

Semester/Year:	III Sem / II Year
-----------------------	--------------------------

Course Code:	26MBAR003
Title Of the Course:	Machine Learning Basics
L: T: P: C:	3: 0: 2: 4

Overview

In this course students will be focused on developing a deeper understanding of machine learning models both from theoretical and implementation perspectives. The course provides understanding of data from multiple perspective and provides a comprehensive overview of data architecture and latest data warehousing concepts. It provides a detail of cloud services from data architecture perspective, bedrock for building machine learning models for different business use cases. Students will learn about the different layers of the data pipeline, approaches to model selection, training, scaling, as well as how to deploy, monitor, and maintain ML systems.

Course will be hands on using python packages and mini projects will be implemented.

Course Objectives

1. To learn data needs of various business domains, Datawarehouse concepts and cloud data architecture
2. To provide comprehensive algorithmic perspective of building machine learning models
3. To identify and implement appropriate feature extraction and selection techniques
4. To implement supervised, unsupervised machine learning algorithms using Python
5. To learn ML lifecycle from data engineering until model evaluation and monitoring

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of data architecture course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of supervised and unsupervised ML algorithms in real-time problem-solving course
3. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of machine learning in real-time problem-solving course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of machine learning in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of machine learning in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Hands on exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding & business application by way of: • Mini projects • Group assignments • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Data to Insights & Analytics Data architecture, data lake, data Lakehouse, data fabric, data mesh, data hubs, reference data architectures, graph database, cloud data architecture, cloud services overview, AWS vs. Azure vs. GCP, data storytelling & visualization, descriptive, predictive and prescriptive analytics.	8
Unit II	Machine Learning Introduction to machine learning, supervised learning- Classification and regression, generalization, overfitting and underfitting, k-nearest neighbours, linear models, naive bayes classifier, decision tree, support vector machines, unsupervised learning, challenges in unsupervised learning, preprocessing and scaling, dimensionality reduction, feature extraction and manifold learning: PCA, clustering: K-means.	8
Unit III	Feature Engineering & Model Evaluation Automatic feature selection, model-based feature selection, iterative feature selection, data quality check, data cleansing, data imputation, Gini impurity index, entropy, chi square automation interaction detection (CHAID), chi-square test of independence for feature selection, cross-validation benefits of cross-validation, stratified k-fold cross-validation, grid search, evaluation metrics and scoring.	8
Unit IV	Advanced ML Models Ensemble methods, random forest (RF), variable importance, boosting techniques: Adaptive boosting and gradient boosting, classification and regression trees (CART), recommender systems using association rules and collaborative filtering using python libraries.	8

Unit V	ML Ops Key stages in ML development lifecycle and Key components in ML Systems, Infrastructure and Cloud Services/Tools for data preparation, Model building and deployments. Model deployment concepts like model compression, concept drift, monitoring and Model updates.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAR004
Title Of the Course:	Managing AI Transformation
L: T: P: C:	3: 0: 2: 4

Overview

This course is designed to prepare managers and leaders for the evolving AI-driven business landscape. The course covers the fundamentals of AI implementation, product strategy, organizational change, and the broader societal and ethical implications of AI. Students will explore real-world use cases, develop data-driven product visions, and examine global governance frameworks to manage AI responsibly and effectively.

Course Objectives

1. To understand the AI and ML business landscape
2. To learn how to develop and execute AI product strategies
3. To learn to lead and manage organizational change for AI adoption
4. To evaluate ethical, legal, and societal impacts of AI
5. To learn how to navigate global AI governance and regulations

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of AI transformation fundamentals course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of AI-driven product strategy frameworks in real-time problem-solving course.
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of organizational, societal, and geopolitical impacts of AI technologies course.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of ethical AI frameworks in real-time problem-solving course.
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of global AI governance in real-time problem-solving course.

Approach to Learning	● Lectures ● Readings ● Hands on exercises ● Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding & business application by way of: ● Mini projects ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	AI Transformation- Introduction The AI & ML landscape – Emerging business models, AI project vs. traditional project, building and driving the AI culture, change management for AI, agile methodology - Project life cycle, impact of AI technologies – Digital economy canvas.	8
Unit II	AI Driven Product Strategy AI product economics and roadmap, developing an AI product vision and data strategy, AI project success - Key pillars, driving AI product adoption, marketing AI products.	8
Unit III	Managing AI Impact Gen AI ecosystems, managing GenAI and agentic AI systems in an organization, Implications: Labour market, society, geopolitics, real world use cases.	8
Unit IV	AI Ethics Bias and representativeness issues, ethical issues, issues of accuracy, test-retest reliability, methodological artifacts, legal issues, climate issues, AI ethics frameworks.	8
Unit V	Global AI Governance AI governance- Country specific-perspectives, country specific acts and regulations, google & Microsoft AI principles, UN – Governing AI for humanity.	8

Semester/Year:	IV Sem /II Year
Course Code:	26MBAR005
Title Of the Course:	Industry Applications of AI
L: T: P: C:	3: 0: 2: 4

Overview

This course is designed to provide learners with practical insights into how artificial intelligence is transforming key industry domains such as sales and marketing, financial services, healthcare, supply chain management, and human resources. The course emphasizes real-world use cases, enabling students to understand and apply AI models. With a focus on both generative and predictive AI techniques, the course bridges theoretical concepts with hands-on industry applications, preparing learners to design, implement, and evaluate AI-driven solutions that address business challenges.

Course Objectives

1. To provide students with an in-depth understanding of AI use cases across major industry domains
2. To enable students to analyse and apply AI models for sales, marketing, and customer engagement solutions
3. To equip students with knowledge of AI-driven decision-making in financial services, healthcare, and supply chain management
4. To introduce students to generative AI applications for content creation, personalization, and process automation in different industries
5. To develop awareness of AI applications in human resource management for recruitment, learning, and operational efficiency

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of AI applications in sales and marketing course.
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of AI applications in financial services in real-time problem-solving course.
3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of AI applications in healthcare course.
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of AI applications in supply chain real-time problem-solving course.
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of AI applications in human resource management in real-time problem-solving course.

Approach to Learning	● Lectures ● Readings ● Hands on exercises ● Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding & business application by way of: ● Mini projects ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	AI in Sales and Marketing Use case understanding across: Sales, customer, marketing campaigns & content generation, models for campaign analytics, customer journey mapping solution, AI recommendation system, content generation use cases using Gen AI.	8
Unit II	AI in Financial Services Use case understanding across: Banking, insurance & fintech, models for credit risk assessment, fraud detection AI solution, chat-based customer support, next best product recommendation.	8
Unit III	AI in Healthcare Use case understanding across: Healthcare services & pharma, insights into diagnostics, care processes, treatment variability, and patient outcomes. Clinical decision-making techniques.	8
Unit IV	AI in Supply Chain Management Use case understanding across: Supply chain logistics, warehouse & inventory management from manufacturing & retail industry, models for inventory optimization, route optimization models, warehouse automation solutions, demand forecasting & supplier evaluation models.	8
Unit V	AI in Human Resource Management Use case understanding across: Recruitment, training, HR operations across industries, AI model development recruitment screening, personalized learning & development solution, content generation using Gen AI, HR assistant chat bot.	8

Semester/Year:	III Sem / II Year
Course Code:	26MBAT001
Title of the Course:	Financial Services Technology and Management
L: T: P: C:	3: 0: 2: 4

Overview

This course provides a comprehensive understanding of the evolving landscape of financial technology (Fintech) and its impact on financial services. The course explores the intersection of finance and technology, highlighting key innovations, trends, and challenges in the industry.

Course Objectives

1. To understand the fintech landscape and evolution of fintech
2. To demonstrate the ability of application of concepts of cryptocurrency and Blockchain
3. To exhibit the ability to apply and analyse the aspects of digital finance and alternative finance
4. To comprehend the technology in financial regulatory framework
5. To discuss data and security in fintech

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of financial services and technology management course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of financial services and technology management in real-time problem-solving course
3. Demonstrate the ability of analyzing the real time problems using skill acquired by concepts, theories, models and principles of financial services and technology management course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of financial services and technology management in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of financial services and technology management in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of fintech practices by way of: • Mini projects • Submission of assignments • Group assignments • Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to Fintech Introduction and meaning of fintech, technology and financial market disruption, understanding platform economy, fintech business models, fintech ecosystems and its dimensions, fintech around the world. Fintech startups infrastructure, banks startups and emerging markets, collaboration between financial institutions and startups, opportunities and challenges. Green fintech.	8
Unit II	Payments, Crypto Currencies and Related Technology Individual payments, digital financial services, mobile money, regulation of mobile money- SFMS, RTGS, NEFT, NDS systems. Mobile payments (NFC, QR codes, UPI), cross-border payments and remittances, the benefits from new payment stacks. Crypto currencies- Legal and regulatory implications of crypto currencies. Blockchain and cryptocurrency.	8
Unit III	Digital Finance and Alternative Finance Brief history of financial innovation, digitization of financial services, fintech & funds: Crowdfunding, charity and equity, P2P and marketplace lending- new models and new products: Initial coin offering (ICO).	8
Unit IV	FinTech Regulation and RegTech FinTech regulations, evolution of RegTech, financial institutions and RegTech ecosystem, ensuring compliance from the start, RegTech startups: Challenges and regulators industry, use case of AI in smart regulation and fraud detection, anti-money laundering. Regulatory sandboxes: Smart regulation, redesigning better financial infrastructure. Risks and compliance in fintech ecosystems.	8
Unit V	Data and Fintech Introduction, history of data regulation, data in financial services, application of data analytics in finance, methods of data protection: GDPR compliance and personal privacy, role of AI in transforming the future of fintech – Digital identity, change in mindset: Regulation 1.0 to 2.0 (KYC to KYD), AI & governance, new challenges of AI and machine learning, challenges of data regulation, the future of data-driven finance - Case studies.	8

Semester/Year:	III Sem / II Year
----------------	-------------------

Course Code:	26MBAT002
Title Of the Course:	Blockchain For Business
L: T: P: C:	3: 0: 2: 4

Overview

This course is intended to enable students to understand how blockchain technologies are transformational. Blockchain technologies can enable enterprises to reinvent processes and business models, and pursue radically disruptive use cases.

This course brings clarity and pragmatism to blockchain technologies and opportunities and presents real-world examples that demonstrate what blockchain can and can't do. It explains technology's current state and introduces industry-specific and cross-industry use cases, reviews approach to implementation and governance and preview emerging capabilities.

Course Objectives

1. To define blockchain and why it matters for business
2. To exhibit the ability of application of the various blockchain technology ecosystems in business models.
3. To demonstrate the ability to create the governance structure for blockchain networks
4. To analyse the blockchain project financial fundamentals
5. To assess the blockchain opportunities and challenges

Course Outcomes

1. Exhibit the fair understanding of concepts, theories, models and principles of blockchain for business course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of blockchain for business in real-time problem-solving course
3. Demonstrate the ability of analyzing the real time problems using skill acquired by concepts, theories, models and principles of blockchain for business course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of blockchain for business in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of blockchain for business in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of blockchain by way of: • Mini projects • Submission of assignments • Group assignments • Written exam

Syllabus

1. Mini project
2. Group assignments
3. Reflection based on guest talk on blockchain

Semester/Year:	III Sem / II Year
Course Code:	26MBAT003
Title of the Course:	Innovations In Wealth Management
L: T: P: C:	3: 0: 2: 4

Overview

This course is intended to provide students a concise, yet comprehensive overview of how financial technology (FinTech) is revolutionizing wealth management. Students explore digitization of Wealth tech, digital platforms, blockchain applications, enterprise innovation and get a global overview to understand the evolving landscape of wealth management. Through discussions and practical exercises, they learn to navigate opportunities and challenges in leveraging technology for financial success.

Course Objectives

1. To learn the basics of application of technology in wealth management
2. To discuss digital business models in wealth management and client advisory
3. To analyse the digital platforms, products and associated ecosystems
4. To exhibit the ability to comprehend the use of blockchain in asset management
5. To develop and design the futuristic applications of technology in wealth management in global context

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of innovations in wealth management course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of innovations in wealth management in real-time problem-solving course
3. Demonstrate the ability of analyzing the real time problems using skill acquired by concepts, theories, models and principles of innovations in wealth management course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of innovations in wealth management course in real-time problem-solving
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of innovations in wealth management course in real-time problem-solving

Approach to Learning	● Lectures ● Readings ● Active student participation and classroom exercises ● Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of fintech practices by way of: ● Mini projects ● Submission of assignments ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to Wealth tech Fintech disruptions across the wealth management value chain, essential digitization in wealth management, building wealth-tech applications.	4
Unit II	Digitizing Client Advisory and Robo-Advisors Challenges of digitizing wealth management advisory, leveraging gamification in attracting consumers to sign up, the role of AI in wealth management. Digitizing wealth management operations - Digital business model, digital architecture leading to tangible business results, personalization, cyber resilience. managing ESG in investing, advent of ESG mutual funds.	12
Unit III	Digital Platforms, Products and Ecosystems Wealth management as a platform, digitize wealth management at banks, financial forecasting and portfolio optimization in the 21st century, AI powered wealth management products and investment vehicles.	8
Unit IV	Blockchain Applications in Asset and Wealth Management Cryptocurrencies and blockchain, innovation driven by blockchain in asset management, blockchain as a backbone to asset and wealth creation, trust arbitrage, future of wealth manager, investment and issuance distributed in blockchain.	8
Unit V	Enterprise Innovation Leveraging corporate innovation by opening banks to external ecosystems. Global overview – China's role in shaping the future of wealth tech and financial services, wealth tech in Latin America, unlocking wealth tech in Turkey, challenges in the Japanese market.	8

1. Relevant articles and case studies from repositories of global repute

Suggested Courses

1. Managing Wealth through Fintech – Udemy.
2. Lending, Crowdfunding, and Modern Investing – Coursera.

Semester/Year:	III Sem / II Year
Course Code:	26MBAT004
Title Of the Course:	Digital Payment
L: T: P: C:	3: 0: 2: 4

Overview

This course provides an overview of the evolution of payment systems, from traditional cash-based transactions to digital and mobile payment solutions. It examines the key technologies underpinning digital payments, such as blockchain, mobile wallets, and payment gateways, and discusses their advantages, challenges, and potential future developments. It also emphasizes banking technologies and its real time applications.

Course Objectives

1. To learn the importance and use of digital payments systems
2. To analyse various digital payment platforms and technologies
3. To explain the emerging trends and innovation in the digital payment landscape
4. To assess the evaluation of digital banking technologies and transformation in mobile commerce
5. To understand various aspects of banking as a service

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of digital payment course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of digital payment in real-time problem-solving course
3. Demonstrate the ability of analyzing the real time problems using skill acquired by concepts, theories, models and principles of digital payment course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of digital payment in real-time problem-solving course
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of digital payment in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of Finance practices by way of: • Mini projects, • Submission of assignments • Group assignments • Written Exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to FinTech and Digital Payments Overview of fintech: Evolution, trends, and impact, digital payment ecosystem: Players and behind the platform processes, mobile payments: Wallets, QR codes, NFC, and mobile apps, online payments: E-commerce, payment gateways, and digital wallets, regulatory framework for digital payments.	8
Unit II	Digital Payment Platforms and Technologies Payment processing technologies: POS systems, EMV, and contactless payments. Peer-to-Peer (P2P) payments, payment APIs and open banking: Integration and interoperability. Biometric authentication in payments: Fingerprints, facial recognition, and voice authentication. Tokenization and secure transactions, digital identity and know your customer (KYC) in payments.	8
Unit III	Payment Innovation and Emerging Trends RTGS, NEFT, wire transfer, standing instructions & real-time payments: Instant settlement and faster payment systems, BNPL, A2A. Cross-border payments: Challenges, solutions, and ripple net, internet of things (IoT) and payments: Smart devices and connected payments, voice commerce & voice -activated payments, artificial intelligence and machine learning in fraud detection and risk management. Future of payments: Trends, predictions, and innovations, role of digital payment and sustainable financial inclusion.	10
Unit IV	Banking Technologies and Digital Transformation Digital banking: Evolution, features, and benefits, neo banks with evolution. Electronic & mobile commerce: Introduction to electronic commerce, business models, market research and e-commerce.	6
Unit V	Banking as a service Banking as a service (BAAS), back-office operations: Credit appraisal systems, forex management, treasury management, risk management - Operational risk, MIS/DSS/EIS, business continuity, personalization and customer experience in digital banking. New initiatives - digital currency, green lending platforms.	8

Semester/Year:	IV Sem / II Year
Course Code:	26MBAT005
Title of the Course:	Technologies in Banking, Insurance and Regulatory
L: T: P: C:	3: 0: 2: 4

Overview

This comprehensive course on technologies in banking, insurance and regulatory delves into the innovative technologies and regulatory frameworks transforming the banking and insurance industries. Students will gain a deep understanding of the latest advancements in banking technology (Bank Tech), insurance technology (Insurtech), and regulatory technology (RegTech) and their implications for financial institutions and regulatory compliance.

Course Objectives

1. To understand the fundamentals of bank tech, Insurtech, and regtech
2. To identify the key technologies driving transformation in banking sector
3. To evaluate the impact of technology on insurance sector
4. To analyse the challenges and opportunities of new age business model applied in insurance sector
5. To discuss the regulatory technology applicable to banking and insurance sector

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of concepts, theories, models and principles of technologies in banking, insurance and regulatory course
2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of technologies in banking, insurance and regulatory in real-time problem-solving course
3. Demonstrate the ability of analyzing the real time problems using skill acquired by concepts, theories, models and principles of technologies in banking, insurance and regulatory course
4. Exhibit the ability of designing and redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of technologies in banking, insurance and regulatory in real-time problem-solving.
5. Exhibit the ability of developing / redesigning existing and new models by using the acquired skills from concepts, theories, models and principles of technologies in banking, insurance and regulatory in real-time problem-solving.

Approach to Learning	● Lectures ● Readings ● Active student participation and classroom exercises ● Case analysis collaboratively with student involvement
Assessment Strategy	Participants will be assessed on both conceptual understanding and business application of technologies by way of: ● Mini projects ● Submission of assignments ● Group assignments ● Written exam

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Overview of BFSI Introduction of BFSI, evolution and significance of BFSI, fundamental concepts in banking and financial services, role of fintech in banking, insurance, and regulatory compliance, impact of digital transformation on financial services regulatory landscape in fintech.	5
Unit II	Bank Tech Digital banking, mobile payments and application programming interface, blockchain technology and crypto currency. Digital transformation in banking, core banking systems, big data analytics, AI and machine learning applications in banking industry, customer experience and personalization in digital banking. Case studies: Successful implementation of bank tech solutions.	7
Unit III	Introduction to Insurtech Conceptual framework: Introduction to insurance, brief history of insurance, perils and risks, classification of risks, hazards, insurance process, classes of insurance, importance of insurance industry. Foundations of insurance: Traditional insurance models, insurance distribution, challenges in traditional insurance processes. Overview of Insurtech: Definition and evolution of Insurtech, key drivers and trends shaping the Insurtech landscape, key players in Insurtech industry, collaboration between traditional insurers and Insurtech startups. Digital transformation in insurance: Role of technology in transforming the insurance industry, impact of digitalization on customer experience and operational efficiency.	10

Unit IV	Insurtech Business Model Platform-based models: Exploring insurance platforms, API integrations and partnerships. On-demand insurance: Overview of on-demand insurance models, peer-to-peer insurance platforms. Usage-based insurance (UBI): Telematics and UBI applications, benefits and challenges of UBI. Micro insurance and emerging markets: Micro insurance models, expansion of insurance services in emerging markets. Blockchain and smart contracts: Applications of blockchain in insurance, smart contracts and their role in claims processing. Artificial intelligence and machine learning: Chatbots and virtual assistants in customer service, robo-advisors.	12
Unit V	Reg Tech Regulatory technology: Definition and importance, compliance automation and reporting solutions KYC (know your customer) and AML (anti-money laundering) technologies, GDPR and data privacy compliance in financial services, future of payments and digital currencies, case studies: Regulatory compliance innovations in fintech. Cyber security in insurance: Importance of cyber security in the digital insurance landscape, threats and best practices for securing sensitive data. ESG reporting, SEBI ESG reporting regulation in India – BRSR (Business Responsibility and Sustainable Reporting).	6

Semester/Year:	III Sem / II Year
Course Code:	26MBA6303
Title Of the Course:	SDGS & Net Zero Strategy
L: T: P: C:	3: 0: 2: 4

Overview

The SDGs, a blueprint for global sustainability, include tackling climate change as a key objective. A primary strategy to combat climate change, aligned with SDG 13 (Climate action), is achieving net-zero emissions. This involves balancing greenhouse gas emissions with removals, crucial to limiting global warming. Net-zero initiatives not only address climate change but also contribute to other SDGs, such as fostering clean energy and sustainable cities. Therefore, embracing both net-zero strategies and the SDGs is vital for creating a sustainable and resilient future for all. Businesses can significantly contribute to these goals by adopting sustainable practices throughout their operations. This includes investing in renewable energy, reducing waste, and developing innovative green technologies. Ultimately, companies that integrate net-zero strategies with the SDGs not only help address climate change but also enhance their own long-term viability and contribute to a more sustainable world.

Course Objectives

1. To introduce students to the United Nations Sustainable Development Goals (SDGs) and their relevance to business
2. To explore the concept of net zero and corporate climate action
3. To enable students to assess how businesses can align with SDGs
4. To discuss strategies, tools, and best practices for sustainability in different industries
5. To encourage critical thinking and leadership for sustainable transformation

Course Outcomes

- | |
|--|
| After completion of this course students will be able to: |
| 1. Exhibit the fair understanding of concepts, theories, models and principles of SDG and net zero strategy course |
| 2. Demonstrate the ability of applying the skill of concepts, theories, models and principles of SDG and net zero in real-time problem-solving course |
| 3. Demonstrate the ability of analysing the real time problems using skill acquired by concepts, theories, models and principles of SDGs, sustainability and net zero strategies course |
| 4. Exhibit the ability of designing and redesigning existing and new strategies by using the acquired skills from concepts, theories, models and principles of SDGs, sustainability and Net zero in real-time problem-solving course |
| 5. Exhibit the ability of developing / redesigning existing and new strategies and business |

models by using the acquired skills from concepts, theories, models and principles of SDGs, net zero and sustainability principles in real-time problem-solving course

Approach to Learning	• Lectures • Readings • Active student participation and classroom exercises • Case analysis collaboratively with student involvement • Visual presentation
Assessment Strategy	Participants will be assessed on both conceptual understanding and applications SDGs and Net zero principles • Case study discussions & solving mini projects • Submission of assignments and individual presentation

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Introduction to SDGs and Sustainability Origins and evolution of sustainable development, the 17 SDGs and their interlinkages	2
Unit II	Climate Change and the Net Zero Imperative Role of business in achieving SDGs (Case studies of IKEA, Unilever, Infosys), exploring net zero strategies and carbon neutrality, workshop: Mapping a business model to SDGs	2
Unit III	Integrating SDGs into the Business Strategy Circular economy and sustainable supply chains tools: SDG compass, double materiality mapping of business activities.	2
Unit IV	Financing the Transition Paris climate agreement COP21 and ESG reporting in India, green finance, ESG investing, and carbon markets.	2
Unit V	Industry Labs and Leadership for Change India's net zero commitment and progress, mini project & reflection: "What net zero means for me as a future manager".	2

Semester/Year:	IV Sem/ II Year
Course Code:	26MBA6401
Title Of the Course:	Internship/Field Work
L: T: P: C:	0:0: 12: 6

Overview

The course aims to introduce the students to do an organization study. This course will help the students to understand and get a practical exposure of how an organization works. Each student is assigned to an organization, to take up assignments or tasks given by the organization during their study period. This would help and give them to acquire knowledge of the organization functions and its structure.

Course Objectives

1. To provide experiential learning opportunities that enable students to understand real-world business operations, organizational structures, and industry practices.
2. To bridge the gap between theory and practice by facilitating the application of management concepts, models, and tools in real-time organizational settings.
3. To develop analytical, problem-solving, and decision-making skills through exposure to practical business challenges across functional domains.
4. To enhance professional competencies including communication skills, teamwork, leadership qualities, ethical conduct, and workplace adaptability.
5. To foster strategic thinking and industry readiness by encouraging students to identify business opportunities, evaluate sustainable practices, and understand digital transformation in organizations.

Course Outcomes

After completion of this course students will be able to:

1. Exhibit the fair understanding of the concepts, theories, models, and principles relevant to the internship domain
2. Demonstrate the ability of applying appropriate concepts, theories, models, and principles acquired during the internship to address real-time organizational and managerial problems
3. Demonstrate the ability of analysing the real-world business challenges encountered during the internship using analytical skills and theoretical frameworks gained from the course
4. Exhibit the ability of designing and redesigning existing and emerging business problems by integrating internship-based learning with managerial tools and techniques
5. Exhibit the ability of developing / redesigning existing and new strategies and business models by leveraging practical exposure and the application of concepts, theories, and

principles learned during the internship
--

General Guidelines

- | |
|--|
| 1. The internship shall be for a period of minimum 8 weeks after 3 rd semester |
| 2. The university shall receive 2 hard copies and a softcopy of Internship reports |
| 3. The student shall seek the guidance of the internal guide on a continuous basis, and the guide shall give a certificate to the effect that the candidate has worked satisfactorily under his/her guidance |
| 4. Student should submit the Internship completion certificate from their external guide |
| 5. On completion of the internship, the student shall prepare an internship report with the following format: |

Structure and Schedule for the Internship

Activity	Time line	Structure
Understanding The Company: structure, culture, mission, vision, products/services, and functioning of the organization	1 st week of internship	Student should understand about the industry and its growth in depth. Submit Internship Joining Report along with Internship Confirmation Letter.
Porter's Five Force model, SWOT Analysis of the company and	2 nd week of internship	Students should understand the about the company and should prepare a report on profile of the company including SWOT analysis, Porter's Five Force Model within which the company is operating. Submit fortnightly report – soft copy
Application of McKinsey's 7 S framework to the company	3 rd week of internship	McKinsey's 7 s framework has to be applied to the company
Study of organization departments	4 th week	Detailed study of all departmental activities depending on the nature of the organization. Submit fortnightly report – soft copy
Analysis of functional specialization/ Financial Statements and reports	5 th week	Analysis of Financial Statements and reports should be done by making use of financial analysis tools so that business can be understood better.
Submission of 1 st draft	6 th week	After collecting the required data, the data should be edited, coded, tabulated and presented for the purpose of analysis and interpretation with the consultation of the guide. Submit the 1 st draft of the report. Submit fortnightly report – soft copy
Submission of 2 nd draft and plagiarism check	7 th week	As per the guides suggestions mentioned revise the draft and submit the 2 nd draft to the guide once the guide approves, get the plagiarism check for the internship report
Submission of final Internship report	8 th week	Final internship report has to be submitted to the department signed by the respective guides after incorporating all the suggestions. Submit fortnightly report – soft copy

CO5	3	3	3	2	2	3	2	3	3

Evaluation of the Internship Report

1. Internal evaluation will be done by the internal guide.
2. External valuation shall be done by a faculty member of other college/university Viva-Voce/Presentation: A viva- voce examination shall be conducted. Student is expected to give a presentation of his/her work. The viva-voce examination will be conducted by respective Professor of the department and an expert of other college/university.
3. Internship report carries 100 marks consisting of 50 marks for CIE component by the internal guide and 50 marks for SEE for external evaluation and viva-voce examination.

Contents of the Internship Report

1. Cover page
2. Certificate from the organization
3. Certificate from the guide, Dean of the Institution indicating Bonafide performance of internship by the student.
4. Declaration by the student
5. Acknowledgement
6. Table of the contents
7. List of tables and graphs

Presentation of Report

The following sequence should be followed in the presentation of internship project report.
A. Cover Page
B. Certificates - Title Page - Certificate (Guide / College) - Certificate (Organization) - Student Declaration - Acknowledgement - Contents - List of tables / charts - Executive Summary
C. Chapter - Introduction - General Introduction - Objectives of the Study - Industrial Background of the Study - Origin of the Industry

Marks Allocation for the Internship Report

SL. NO	ASPECTS	MARKS
1	Internship Joining	10
2	Fortnightly Reports (5 marks each for 4 reports)	20
3	Final Report	20
4	Viva-Voce	50
	Total	100

Rubrics for the Evaluation of the Internship Report

Parameters	Allocated Marks	Low	Medium	High
------------	-----------------	-----	--------	------

Internship Joining Letter	10	Non-submission of internship joining letter	Delayed in the submission of internship joining letter	On time submission of the internship joining letter
		0 - 2 Marks	3 - 5 Marks	6 - 10 Marks
Fortnightly Reports (5 marks each for 4 reports)	20	Submitted 1 or no submission of the fortnightly reports	Submitted 2 fortnightly reports and 2 reports were delayed	Submitted all the Fortnightly reports on time meeting the deadline
		0 - 5 Marks	6 - 10 Marks	12 - 20 Marks
Final Report	20	Project report not prepared according to the specified format, References are not appropriate	Project report is according to the specified format, but not well prepared, References are missing	Project report is according to the specified format, References are appropriate
		0 - 5 Marks	6 - 10 Marks	12- 20 Marks
Viva -Voce (50 Marks)				
Introduction	10	Demonstrated with limited knowledge of facts, terms and concepts	Demonstrated considerable knowledge of facts, terms and concepts	Demonstrated through knowledge of facts, terms and concepts
		0 - 2 Mark	3 - 5 Marks	6 - 10 Marks
Content and Adequacy of coverage of Mc Kinsey, Porters and Swot Analysis	20	Exhibited impartiality with limited Knowledge	Exhibited impartiality with considerable Knowledge	Exhibited impartiality with a high degree of Knowledge
		0 - 5 Marks	6 - 10 Marks	12- 20 Marks
Communication Skill and Level of Confidence (Oral)	10	Language and/or delivery resulted information being communicated orally with limited effectiveness	Language and/or delivery resulted information being communicated orally with considerable effectiveness	Language and/or delivery resulted information being communicated orally with high degree of effectiveness
		0 - 2 Mark	3 - 5 Marks	6 - 10 Marks

Time Management, Q & A Session	10	Presentation not delivered within the stimulated time. Questions are not answered	Presentation delivered within the stimulated time. Questions are answered but not up to the mark	Presentation delivered within the stimulated time. Questions are answered well
		0 - 2 Mark	3 - 5 Marks	6 - 10 Marks

Semester/Year:	IV Sem/ II Year
Course Code:	25MBA6402
Title Of the Course:	Project Work
L: T: P: C:	0:0: 24: 12

Overview

The project work is aimed at making students apply the conceptual knowledge in getting tangible results. Students would identify a research problem either from a real scenario or by identifying a research gap from existing research literature. Students then develop a research plan and research methodology based on various concepts learned through

different courses of their MBA program. The research plan is then executed in designing data collections tools, conducting data collection, performing data analysis using various statistical tools, interpreting the research results, framing the model to be deployed to solve the problem at hand and framing the suggestions to handle similar types of problems. This project will help students learn the practical applications of concepts in solving real life business problems

Course Objectives

1. To develop in-depth conceptual understanding of relevant theories, models, and frameworks applicable to business research and managerial problem-solving.
2. To provide an opportunity to apply theoretical knowledge in investigating real-time organizational or research-based business problems.
3. To strengthen analytical and research competencies through systematic data collection, interpretation, and evidence-based analysis.
4. To enhance strategic thinking and solution design skills by integrating theoretical insights with empirical findings to address contemporary business challenges.
5. To cultivate independent research ability and professional competence in developing, evaluating, and refining business strategies, frameworks, or models.

Course Outcomes

- After completion of this course students will be able to:
1. Exhibit a thorough understanding of relevant concepts, theories, models, and principles applicable to the project work.
 2. Apply appropriate concepts, theories, models, and principles to investigate and address real-time business and managerial problems within an organizational or research context.
 3. Analyze real-world business problems using analytical and research skills derived from established concepts, theories, models, and principles.
 4. Exhibit the ability of Design, evaluate, and refine strategies or solutions for existing and emerging business challenges by integrating theoretical knowledge with empirical findings from the project.
 5. Exhibit the ability of Develop or redesign business strategies, frameworks, or models based on systematic analysis and insights generated through the project.

General Guidelines

1. The project work shall be for a period of twelve weeks immediately after the completion of third semester end exams. Students either on their own or in consultant with their Guides identify the problem for his/her study according to their interest.
2. On Finalization of the topic/problem, synopsis has to be prepared and submitted to the guide.
3. Synopsis should have problem statement, importance of the problem, objectives, research design and expected outcome.

Structure and Schedule for the Project

Activity	Timeline	Remarks
Research area and problem identification	I Week	Students may propose the research area and the specific problem to the guide according to their interest. The problem may be revised / refined by the guide if required.
Submission of Synopsis		Synopsis has to be submitted as per the format attached.
Synopsis Approval		Synopsis has to be approved by the Internal Guide.
Review / Meeting – I	II and III Week	Completion and finalizing Research design. Review of Literature
Review / Meeting – II	IV and V Week	[Appropriate research Design, Research Method, Method of Study, Sample / Population, Data collection method and Data analysis tools.] Data collection Mechanism and the related material – Questionnaire(s)/ Secondary Source, Web-sites (or) Libraries where students may get the required data. Mapping of the appropriate and suitable analytical tools for the data which is proposed.
Review / Meeting – III	V and VI Week	Data collection (<i>During the data collection period Students may contact and review the data collection process if required.</i>) Submission of data collected to the guide for approval. Once approved, guide may approve for data analysis. Status of data analysis with guide, if required with expert(s) meeting may be arranged.
Review / Meeting – IV	VII & VIII Week	Data Analysis using suitable analytical tools for the data which is proposed.
Review / Meeting – V	IX and X	Report preparation as per the format attached. [This review is primarily to investigate the preliminary pages, subject matter, and analysis part, appropriateness of findings, suggestion and conclusion.] Submission of Rough-Draft 1 of entire project for final approval.
Review / Meeting – VI	XI	Submission of Rough-Draft 2 of entire project for final approval. After the guides approval and necessary changes made, plagiarism check to be sent.
Review / Meeting – VII	XII	Final project – Final copy Submission.

Findings & Suggestions	20	Project report not prepared according to the specified format, References are not appropriate	Project report is according to the specified format, but not well prepared, References are missing	Project report is according to the specified format, References are appropriate
		0 - 6 Mark	7 - 14 Marks	15 - 20 Marks

Guidelines of Project Report

General:

1. Continuous review with Respective guides is mandatory.
2. Choice of title / Research problem is completely open [In terms of choice and area] and freelance by nature.
3. Similarity index (Plagiarism Report should be less than 15%).

Report:

1. Preliminary pages and the chapter separators [if any] and annexure (s) should not have page numbers.
2. Preliminary pages should be strictly as per the formats attached or informed by the University from time to time.
3. Items given Italics within square brackets {i.e., [Student Name]} in the format(s) should be replaced by the appropriate aspects.
4. Questionnaire(s), financial statement(s) or any other data collection instrument [Whichever is applicable] used in the report should be given under Annexure(s).
5. Report should not exceed 100 pages.
6. Report should be printed in the A4 size sheet by allowing 1" margin on top and bottom 0.5" gutter margin and 0.5" margin from right.
7. Two copies of Hard Bound to be submitted and soft copy [One for Department and to student] as per the format attached. [No spiral Binding allowed]

Evaluation:

1. Internally the report would be evaluated by the internal guide as part of the evaluation.
2. External evaluation would be executed by the expert from the other institution/college/ industry proposed by the college in the form of viva-voce.
3. Viva-voce is mainly concerned with the understanding of research process and the appropriate use of the research methods in the real-life business problem(s).
4. Data analysis part and the conclusion of the project carry more weight age in evaluation of the report.
5. Students may present their research findings in Seminars /Conference/ Technical/ Management Fests or publish their research work in Journals in association with their Internal Guide.

Font and alignment specification(s)

SL. NO.	ITEM(S)	SPECIFICATION(S)
1	Font [All the contents]	Times New Roman [Strictly No mix of fonts]

2	Text	Body of the report: Times new Roman 12 pts, Justified. Space: 1.15-line spacing, before paragraph - 0 pts, after the paragraph – 6 pts.
3	Chapter name	All Caps, Centred, Bold and Sized to 16 pts.
4	Title of the chapter	All Caps, Centred, Bold and Sized to 15 pts.
5	Sub Heading Level – I	All Caps Left Aligned Bold and Sized to 14 pts. To be numbered with chapter number. [For Ex, 1.1, 1.2, etc]
6	Sub Heading Level – II	All Caps Left Aligned Bold and Sized to 13 pts. To be numbered with chapter and sub heading number. [For Ex, 1.1.1, 1.1.2, 1.1.3 etc]
7	Table(s)	[1] Tables name should be given on top with unit of measurement if any and numbered according to the chapter and should be given in a single line. [Ex. Table 1.1 – Exploration of Respondents Occupation] [2] Table should be centred [3] Text content of table should be left aligned. [4] Number content of table should be Right aligned [5] Stubs to be Aligned left and bold. [6] Captions to be aligned Centre and bold. [7] Total [Row, Column and Grand] to be bold faced. [8] Source note is compulsory.
8	Chart(s), Graph(s), Diagram(s), Flow-Chart(s), Picture(s)	Name should be given on top along with unit of measurement, if any [Should be part of graph/Chart – not as the part of your word document] numbered according to the chapter and should be given in a single line. [Ex. Chat/Graph/Picture 1.1 – Exploration of Respondents Age]

Contents of the Project Report

1. Cover page [To be prepared strictly as per the format given by the University]
2. Certificate from the University.
3. Declaration by the student [To be prepared strictly as per the format given by the university]
4. Acknowledgement
5. Table of the contents
6. List of tables and graphs
7. Executive summary
8. Chapter 1: - Introduction: General Introduction, Importance of the study, Need for the study, Scope of the study and Limitations of the study, Theoretical background of the study.
9. Chapter 2: - Review of Literature: Introduction (Study Area), Background of study, Literature review (Minimum of twenty from Latest to the oldest)
10. Chapter 3: - Research Methodology: Type of research, Data collection, Sampling Technique, Method of Data Analysis, Objectives of the study, Hypothesis,
11. Chapter 4: - Data Analysis and interpretation: Data with relevant tables and graphs. Results obtained by the using statistical tools must be included.
12. Chapter 5: -Findings, Suggestions & Conclusion: Summary of finding, Conclusion and Suggestions/Recommendations

13. Annexure(s):

- ❖ Bibliography [APA Format]
- ❖ Questionnaire, if applicable.
- ❖ Statement(s), if any.

Semester/Year:	IV Sem/ II Year
Course Code:	
Title of the Course:	Indian Knowledge System
L: T: P: C:	2: 0: 0: 0

Overview

The Indian Knowledge Systems (IKS) course offers MBA students a structured engagement with India's rich intellectual and philosophical traditions and their enduring relevance to contemporary management thought. Drawing upon foundational texts such as the Bhagavad Gita, Artha shastra, the Upanishads, and Gandhian economic philosophy, the course bridges classical Indian wisdom with modern challenges in leadership, strategy, ethics, and sustainability. Over five focused sessions, students explore how ancient frameworks of governance, decision-making, organisational values, and holistic well-being can augment Western management models and enrich professional practice in a complex, globalised business environment.

Course Objectives

1. To familiarise students with the foundational concepts, scope, and historical evolution of Indian Knowledge Systems and their significance for management education
2. To explore the philosophical and epistemological underpinnings of IKS particularly the Darshanas, the concept of Pramana, and insights from the Bhagavad Gita as frameworks for ethical and values-based management
3. To examine ancient Indian strategies of governance and economics (Artha shastra, Gandhian trusteeship) and apply them to contemporary strategy, policy, and inclusive business models
4. To integrate IKS perspectives on sustainability, holistic well-being (Ayurveda, Yoga), and Indian aesthetics (Rasa theory) into marketing, operations, and organisational culture
5. To enable students to synthesise IKS learning through critical reflection and application to real-world managerial challenges in Indian and global contexts

Course Outcomes

After completion of this course students will be able to:

1. Explain the foundational concepts, scope, and historical significance of Indian Knowledge Systems and demonstrate their overarching value for modern management theory and practice
2. Apply ethical frameworks, leadership models, and governance insights drawn from the Bhagavad Gita, Darshanas, and Artha shastra to real-time managerial decision-making and strategic challenges
3. Analyse ancient Indian economic thought including Gandhian economics, trusteeship, and Kautilyan strategy to evaluate sustainable and inclusive business models in contemporary organisational environments
4. Design value-based management frameworks and organisational culture initiatives by integrating Indian corporate ethos, the VEDA model of leadership, and sustainability principles from Ayurveda and Yoga
5. Synthesise IKS learning across philosophy, strategy, aesthetics, and sustainability to develop well-rounded, reflective, and purpose-driven approaches to leadership and stakeholder value creation

Approach to Learning	● Pedagogical philosophy — Experiential, reflective, and dialogue-driven, treating IKS as a living tradition rather than historical content ● Three modes of learning — Conceptual engagement (classical texts), contextual application (management practice), and personal reflection (journal and presentations) ● Classroom spirit — Framed through the Indian concept of Satsanga, encouraging open inquiry, active participation, and intellectual openness
Assessment Strategy	Being an audit course, assessment is designed to encourage active participation, reflective thinking, and practical application of IKS concepts. Assessment is continuous and activity-based, with no traditional end-semester examination. Components include reflective journals, short in-class presentations, group discussions, and a final integrative presentation where students connect IKS insights to a management problem of their choice.

Syllabus

Units	Syllabus Details	Teaching Hours
Unit I	Indian Knowledge Systems Definition and scope of IKS, Key domains: Philosophy, science, governance, economics, arts. Historical overview: Vedic traditions, classical period, and contemporary revival under NEP 2020 and AICTE. Indian epistemology: Pramana (Pratyaksha, Anumana, Shabda) as a knowledge framework. Overview of the six Darshanas and their relevance to management thinking, Why IKS for managers: Connecting civilizational wisdom to modern business challenges.	2
Unit II	The Bhagavad Gita The Bhagavad Gita as a management text: Core teachings and their managerial interpretation. Nishkama Karma (detached action) and its application to performance management. Sarva dharma and role clarity in organizations. Triguna theory (Sattva, Rajas, Tamas) and leadership styles. Ethical decision-making: Dharma, Ahimsa, and Satya in corporate governance. Karma Yoga and servant leadership: Relevance to contemporary CSR and stakeholder management.	2

Unit III	Strategic Statecraft and Ethical Enterprise Kautilya's Artha shastra: Structure, purpose, and its status as a classic of strategic management. Saptanga theory (seven elements of the state) and parallels in organizational design. Shadgunya (six strategic policies) and competitive strategy. Gandhian economics: Trusteeship model, Swadeshi, and self-reliant enterprise. Sarvodaya and inclusive growth: Connecting ancient and Gandhian thought to modern ESG and CSR.	2
Unit IV	Indian Work Ethos and Sustainable Leadership Indian work ethos: Concept of Karma, Purushartha (Dharma, Artha, Kama, Moksha) and their organizational meaning. The VEDA model of leadership: Vision, ethics, dedication, and awareness. Value-based management: Purpose-driven organizations in Indian context. IKS and sustainability: Ecological principles from Ayurveda (Panchamahabhuta) and Yoga. Mindfulness and well-being at work: Evidence-based applications in HR and leadership development.	2
Unit V	IKS in Practice: Aesthetics, HR Innovation, and Applied Leadership Rasa theory (Navarasa) and its application to branding, marketing communication, and consumer behaviour. IKS in HR practice: Triguna-based psychometrics, mindfulness-based leadership development. Real-world case examples: IKS in Indian MSMEs, startups, and social enterprises (Ayurveda, Yoga, traditional crafts). Student integrative presentations: Connecting one IKS concept to a current management challenge. Reflective synthesis: Building a personal leadership philosophy grounded in IKS.	2

CO- PO Mapping

	PO1	PO2	PO3	PO4	PO5	PSO1	PSO2	PSO3	PSO4
CO1	3	2	2	2	1	3	1	2	2
CO2	3	3	3	3	2	2	2	3	3

CO4	2	2	3	2	3	2	3	3	3
CO5	3	3	3	3	3	3	3	3	3

Action Based Component

- 1. Reflective Journal (Individual):** Students maintain a brief running journal across all five sessions, recording one insight per module and connecting it to their own professional aspirations or a real-world management scenario.

- 2. Integrative Presentation (Group):** In Module V, groups of 3–4 students present a 5-minute case study in which they apply at least two IKS concepts from different modules to a contemporary business problem (e.g., applying Nishkama Karma to performance management, or Rasa theory to a brand campaign).
